CFU=colony-forming unit, NA= Not Available, UTIs=Urinary Tract Infections.

[a] Intervention duration: In crossover trials, intervention duration of each intervention was half of the study duration.

[b] This percentage represented urine samples of bacteriuria with pyuria in all screened urine samples. The odds ratio was 0.42 (95% CI, 0.23-0.76) for bacteriuria with pyuria in cranberry relative to the control group (P = .004).
