Supplemental Figure 2A. Funnel plot of total effective rate

The vertical line represents the overall effect size, and the diagonal lines that create a triangular area represent indicate the 95% confidence limits (under the fixed-effect setting, with R studio program).

Supplemental Figure 2B. Funnel plot of total effective rate using the trim and fill method

The closed dots are real studies and the open dots are filled artificial studies. The vertical line represents the overall effect size, and the diagonal lines that create a triangular area represent indicate the 95% confidence limits (under the fixed-effect setting, with R studio program).
