S2 Table. Quality assessment of the included studies using the Hoy et al. risk of bias assessment tool.

Study ID	External validity				Internal validity						Scores	
	Was the study's target population a close representative of the general population or, representative of the population in question	Was the sampling frame a true or close representation of the target population ?	Was some form of random selection used to select the sample, OR was a census undertaken?	Was the likelihood of nonresponse bias minimal?	Were data collected directly from the subjects (as opposed to a proxy) ?	Was an acceptable case definition used in the study?	Was the study instrument that measured the parameter of interest shown to have validity and reliability?	Was the same mode of data collection used for all subjects?	Was the length of the shortest prevalence period for the parameter of interest appropriate?	Were the numerator(s) and denominator(s) for the parameter of interest appropriate ?
