SUPPLEMENTAL DOCUMENT 1.

The decision to consider only manuscripts published in 1990 or later was made after consideration of available early childhood development tools and research methodology.

Three prominent developmental assessment tools in use currently across the globe were either developed or updated and re-normed from their first version around this time. This includes the Bayley Scales of Infant Development, which was initially developed in 1969 but updated and re-normed in 1993 (Bayley II), the Mullen Scales of Early Learning, which was published in 1985, and the Griffiths Mental Development Scales, which were originally developed in 1970 but updated and validated in 1996. It was also important to the goal of the study that early childhood development assessment tools included were still in use and could be validly implemented if found to show longitudinal predictive ability.

The past 3 decades have also seen a significant improvement in research study quality, including larger sample sizes, more sophisticated modeling techniques, improved recognition of and adherence to research ethics, and stricter publication requirements. Although somewhat arbitrary, together these factors lead the team to cut the search at the January 1 1990.
