Supplement Table 1. PICO elements

PICO element	Characteristic
Question	Does azoospermia with a history of orchiopexy patient has favorable outcomes after testicular sperm extraction?
Objectives	To determine the incidence of sperm retrieval rate and clinical pregnancy rate after testicular sperm extraction of ex-cryptorchid azoospermia patient with a history of orchiopexy
Population	Azoospermia men who underwent testicular sperm extraction due to cryptorchidism with a history of orchiopexy
Interventions/Exposure	Testicular sperm extraction
Comparisons	Ex-cryptorchid azoospermia *vs*. the idiopathic non-obstructive azoospermia Bilateral cryptorchidism *vs*. unilateral cryptorchidism Orchiopexy age under 10 years *vs*. orchiopexy age over 10 years
Outcomes	Primary outcomes → Sperm retrieval rate Secondary outcomes → Clinical pregnancy rate Restriction of date of publication → No restriction Language restriction → No language restriction Databases MEDLINE (OvidSP) Embase (OvidSP) Cochrane databases (Cochrane Central Register of Controlled Trials, Cochrane Database of Systematic Reviews and Cochrane Health Technology Assessment)

PICO: Population, Intervention, Comparison, and Outcomes.
