Supplementary data

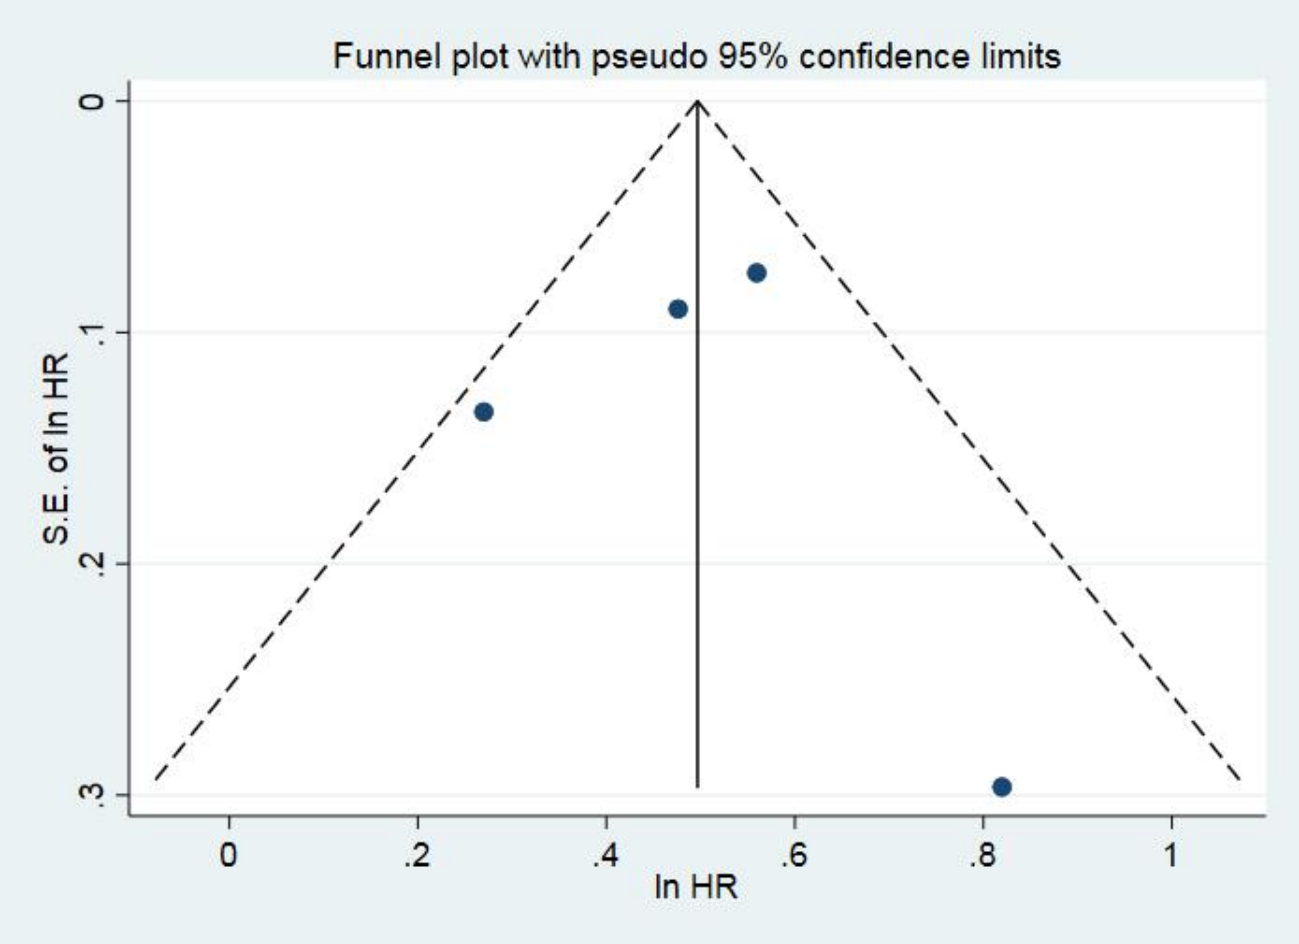

Fig. S1. Funnel plot of selected studies (hypertension to incident NAFLD) describing the relationship between effect size and standard error on the log scale. The vertical line represents the pooled effect size and the dashed lines represent the pseudo 95% confidence intervals.

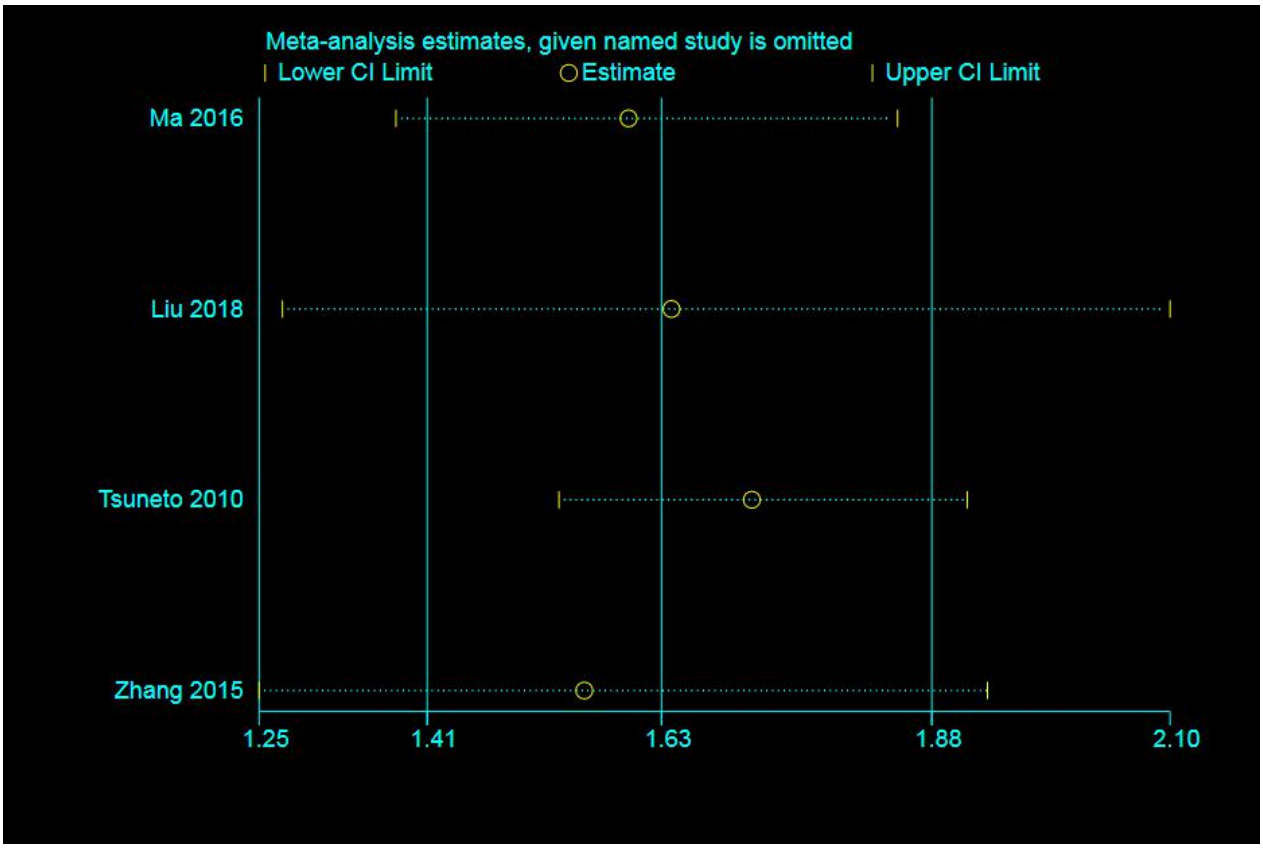

Fig. S2. Sensitivity analysis of the comparison between HTN and non-HTN on the risk of incident NAFLD.

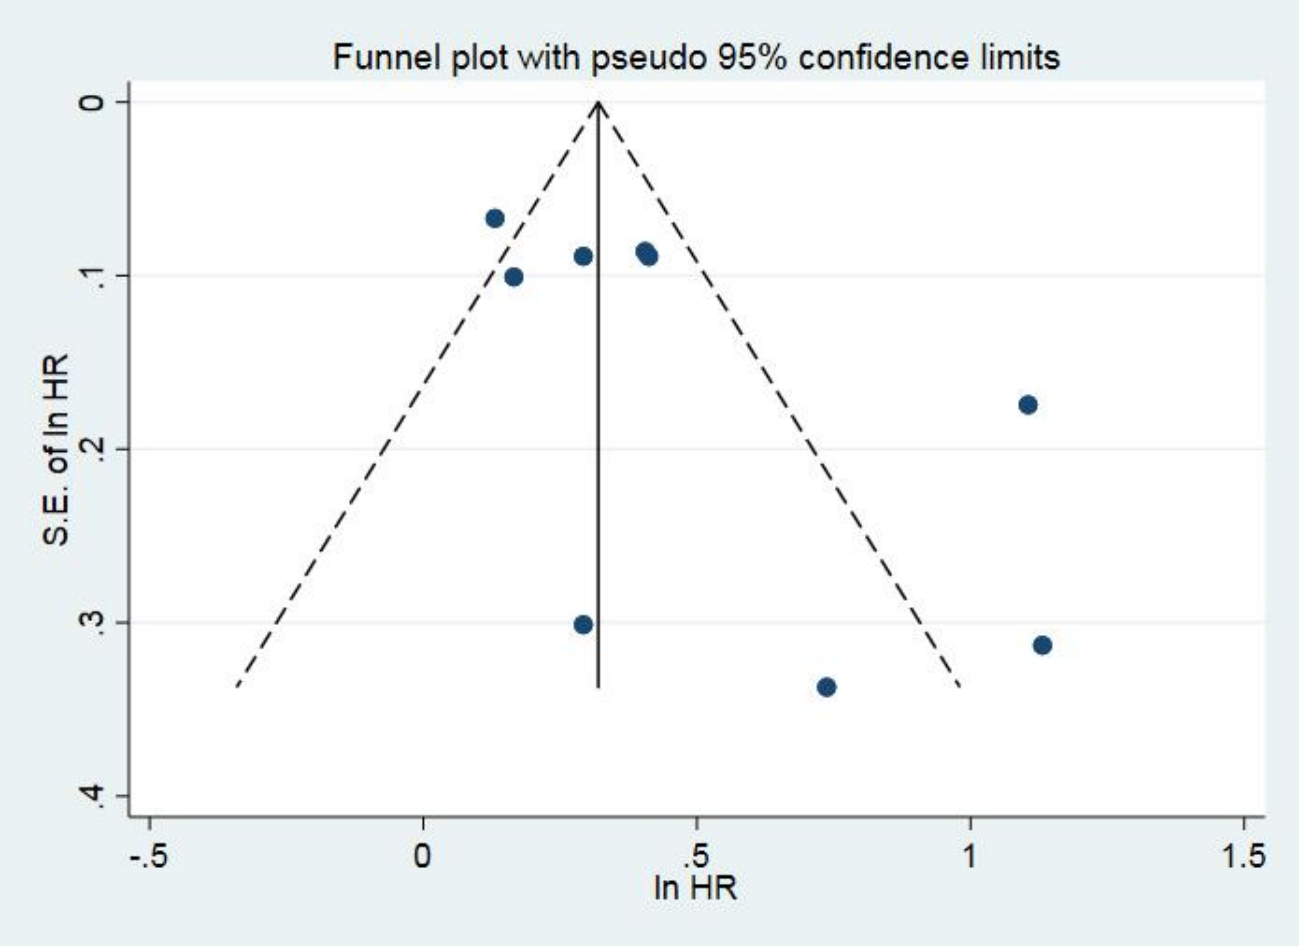

Fig. S3. Funnel plot of selected studies (NAFLD to incident hypertension) describing the relationship between effect size and standard error on the log scale. The vertical line represents the pooled effect size and the dashed lines represent the pseudo 95% confidence intervals.

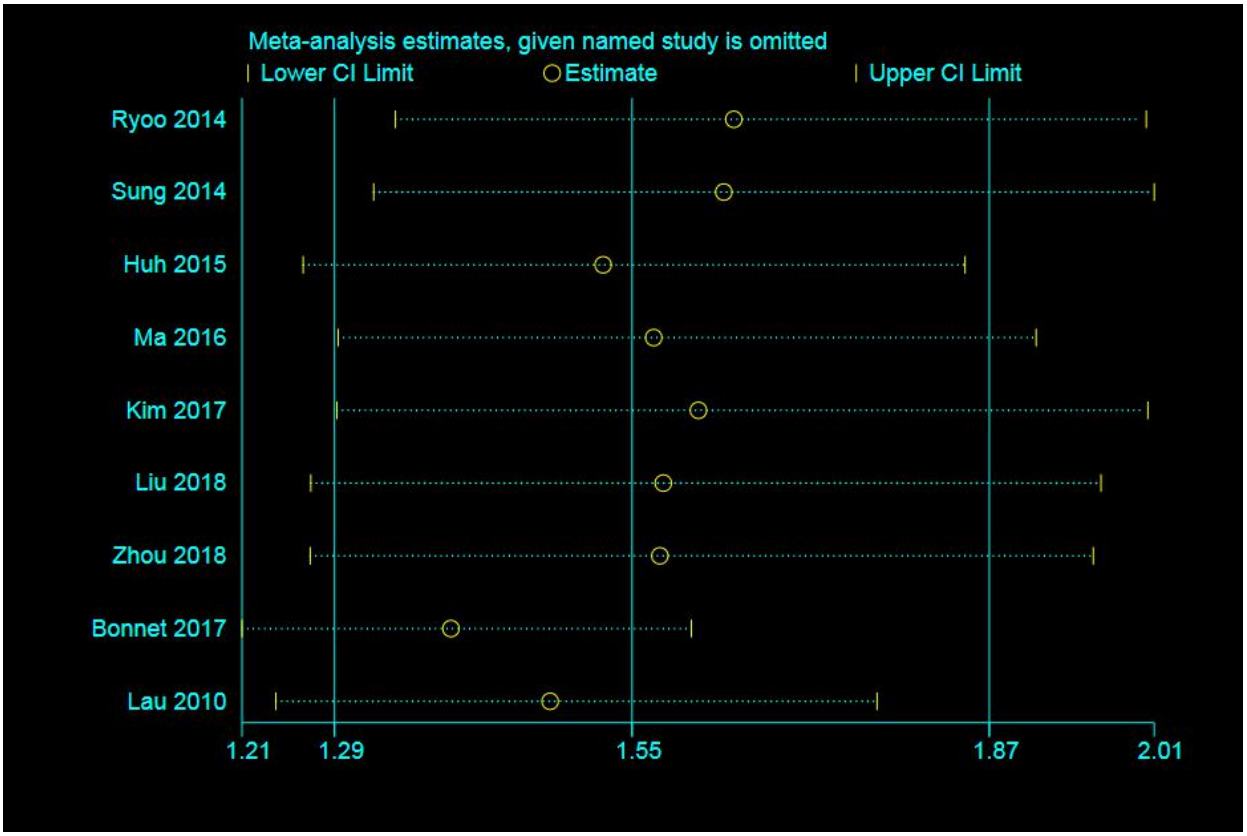

Fig. S4. Sensitivity analysis of the comparison between NAFLD and non-NAFLD on the risk of incident HTN.
