S3 Table. Summary of risk of bias in the included animal *in vivo* studies.

Article	1: Was the allocation sequence adequately generated and applied?	2: Were the groups similar at baseline or were they adjusted for confounders in the analysis?	3: Was the allocation adequately concealed?	4: Were the animals randomly housed during the experiment?	5: Were the caregivers and/or investigators blinded from knowledge which intervention each animal received during the experiment?	6: Were animals selected at random for outcome assessment?	7: Was the outcome assessor blinded?	8: Were incomplete outcome data adequately addressed?	9: Are reports of the study free of selective outcome reporting?	10: Was the study apparently free of other problems that could result in high risk of bias?
