ANNEX C

Full description of studies characteristics

Study (reference)	Profile	Sample	Country of destination	Setting	Study design & measures	Antecedents	Comparator	Outcomes	Type of publication
Bartlett, L., Mendenhall, M., & Ghaffar-Kucher, A. (2017)	Refugee children	n= 23 adolescents (16 female; 7 male) n= 3 teachers **Ages**: 15-17 **Country of origin:** Guinea (7), Honduras (2), Iraq (3), Ivory Coast (1), Myanmar (1), Nepal (5), Pakistan (2), Sri Lanka (1), and Tibet (1).	United States of America	International high schools	**Qualitative** descriptive design. Methodologies applied included photo-cued focus group and interviews	**Factors fostering well-being**: teacher care and support; peer support (specially co-nationals support); appreciation of diversity in school, responsiveness to socio-emotional stress; optimism; resilience; self-reliance **Factors hindering well-being:** Acculturation, prior negative experiences in school	N/A	Psychological well-being, sense of belonging, socio-emotional well-being	**Journal article** International Journal of Intercultural Relations
Betawi, I. A. (2019)	Refugee children	n= 133 children (74 female; 59 male) and n= 133 parents **Ages**: 0-12 (55 children 0-6; 72 children 7-12) **Country of origin:** Syria	Jordan	Refugee camp	**Quantitative** descriptive design. Methodologies applied included a survey.	**Factors hindering well-being**: war exposure	Age, gender	Psychological well-being	**Journal article** Early Child Development and Care
Binstock, G., & Cerrutti, M. (2016)	Voluntary migration	N = 1558 adolescents; n = 381 (24.5%) first generation migrants (200 female, 181 male); **Ages**: 0-18 years **Country of origin:**	Argentina	High schools in boroughs with high proportion of emigrants in urban metropolitan	**Mixed methods**. Convergent design (triangulation). Methodologies applied included a survey, Interviews and focus groups	**Factors hindering well-being**: perception of discrimination; hostility from peers; length of stay; poverty.	Migration background (migrant vs. Natives) and sex	Self-esteem and life satisfaction.	**Conference paper** Desarrollo Economico

		Bolivia, Peru, Paraguay, Other		area of Buenos Aires.					
Borraccino, A., Charrier, L., Berchialla, P., Lazzeri, G., Vieno, A., Dalmasso, P., & Lemma, P. (2018)	Voluntary migration	N = 47,799 adolescents; n = 2004 (4.2%) 1st generation migrants (999 female; 1005 male); **Ages**: 11, 13, and 15 years. **Country of origin:** Western countries (n = 2195); Eastern European countries (n = 2424); Non-Western/non-European countries (n = 2556)	Italy	Cross-national survey	**Quantitative** descriptive design. Methodologies applied included a survey (HBSC)	**Factors hindering well-being**: Eastern and non-Western/non-European background	Migration background (western countries, eastern European countries, non-western/non-European countries), SES	Well-being (internalising and externalising problems)	**Journal article** International Journal of Public Health
Brabant, L. H., Lapierre, S., Damant, D., Dubé-Quenum, M., Lessard, G., & Fournier, C. (2016)	Voluntary migration	n = 42 children (20 girls 22 boys) **Ages**: 9-13 years **Country of origin:** Central America, Europe, Africa.	Canada	Québec. Linguistic competence to express for themselves	**Qualitative**. Narrative design. Methodologies applied included semi-structured interviews	**Factors fostering well-being**: coping strategies (mediator) **Factors hindering well-being:** violence exposure and experience, social exclusion, racism	Country of origin	Physical symptoms	**Journal article** Children & Society
Buchegger-Traxler, A., & Sirsch, U. (2012)	Voluntary migration	N = 1114 adolescents; n = 195 (18%) adolescents from war-affected countries (48% female; 52% male) **Ages**: 15-19 years **Country of origin:** Bosnia-Herzegovina (66%), Serbia (19%), Croatia (9%), Kosovo (3%), and the remainder originated in Montenegro, Albania, and Slovenia. **Length of stay:** a period of approximately 10	Austria	Poly-technical schools, vocational schools, general mandatory schools in urban setting.	**Quantitative** descriptive design. Methodologies applied included a survey.	**Factors fostering well-being:** connectedness, neighbourhood attachment, parental monitoring, religious observance **Factors hindering well-being:** exposure to violence, social distance, intergenerational conflict	Migration background (migrant vs. Natives) and sex	Somatic symptoms (anxiety), depression, overall stress, anti-social behaviour, substance use, resilience, self-esteem, life satisfaction, academic performance	**Journal article** Italian Journal of Public Health

		years (5 to 8 years old at arrival in Austria)							
Burgos, M., Al-Adeimi, M., & Brown, J. (2019)	Voluntary migration	n = 12 adolescent **Ages**: 15-18 years **Country of origin:** Singapore, Syria, Colombia, Iraq, Saudi Arabia, United Arab Emirates. **Length of stay:** 0 to 2 years	Canada	High schools in medium-sized Canadian city.	**Qualitative** descriptive design. Methodologies applied included group interviews and concept mapping.	**Factors fostering well-being:** more positive feedback, talking more, opening home to friends	N/A	Psychological well-being	**Journal article** Child and Adolescent Social Work Journal
Chase, E. (2013)	Asylum-seeking	n = 54 unaccompanied children and young people seeking asylum (29 female; 25 male) **Ages**: 11-23 years. **Country of origin**: 18 different countries (detail N/A)	United Kingdom	Accommodated (or previously accommodated) by local authorities in London	**Qualitative** descriptive design. Methodologies applied included interviews.	**Factors fostering well-being:** order, routine and security, coping /personal resources, education and other regular activities provided structure, security and solace **Factors hindering well-being:** trauma and its destabilising impact on self, lack of status and loss of identity, prospect of deportation, acculturation, uncertainty, mental health (anxiety, depression),	N/A	Psychological well-being	**Journal article** Sociology of Health & Illness
Closs, A., Stead, J., Arshad, R., & Norris, C. (2001)	Voluntary migration	All Scottish education authorities (EAs) in relation to policies and practices Selected key personnel from contrasting EAs. Family members: First study: 16 families ; n = 12 children/young; n	United Kingdom	Schools in all Scottish territories	**Qualitative** descriptive design. Methodologies applied included interviews.	**Factors fostering well-being:** friendships, shared language (belonging) **Factors hindering well-being:** isolation, prejudice,	Migration background (migrant vs. Natives)	Social well-being	**Journal article** Child: Care, Health and Development

		= 16 mothers, n = 6 fathers; Second study: 14 families in the refugee study; n =12 children/young; n = 13 mothers; n = 10 fathers Selected key personnel in schools experienced in educating pupils with medical conditions or refugee pupils: First study n = 14 ; Second study n = 24				anti-refugee propaganda, rejection, racism, desirability of assimilation, bullying, lack of training to integrate refugee children			
Correa-Velez, I., Gifford, S. M., & Barnett, A. G. (2010)	Refugee children	n = 97 children from refugee background (47 female; 50 male) **Ages**: 12-18. **Country of origin:** 68% Africa (Sudan, followed by Ethiopia, Liberia, and Uganda); 27% Middle East (Iraq, Afghanistan, Iran and Kuwait); 5% Eastern Europe (Bosnia and Croatia) and Southeast Asia (Burma).	Australia	English Language School (ELS) in urban setting Melbourne)	**Quantitative** descriptive design. Methodologies applied included a survey (WHOQOL-BREF)	**Factors fostering well-being:** sense of control, living with parents at home, positive feelings about home, good perceived performance in school, peer attachment, greater subjective social status of the family in the broader community **Factors hindering well-being:** fragile family situation, social exclusion, bullying, status in ethnic community, ethnic identity, discrimination experience	Region of origin	Subjective well-being (physical domain)	**Journal article** Social Science & Medicine
Correa-Velez, I., Gifford, S. M., &	Refugee children	N = 460 adolescents participated in five waves of data collection: n =	Australia	English Language School (ELS)	**Quantitative**. Cohort study. Methodologies	**Factors fostering well-being:** previous schooling,	Region of origin	Happiness	**Journal article** Social Science & Medicine

McMichael, C. (2015)		120 wave 1; n = 109 wave 2; n = 100 wave 3; n = 80 wave 4; n = 51 wave 5. Average 49% female 51% male. **Ages**: 11-19 wave 1; 12-20 wave 2; 13-21 wave 3; 14-23 wave 4; 18-27 wave 5 **Country of origin:** average regions of origin were 69.2% Africa; 26.8% middle east; 2.6% eastern Europe; 1.4% southeast Asia		in urban setting Melbourne)	applied included in-depth interviews and structured questionnaires.	self-esteem, moving house in the previous year, and a supportive social environment, supportive social environment, stronger ethnic identity **Factors hindering well-being:** moving at least once in the previous year, perceived discrimination			
DeJong, J., Sbeity, F., Schlecht, J., Harfouche, M., Yamout, R., Fouad, F. M., … Robinson, C. (2017)	Refugee children	16 Focus Group Discussions (8 for each sex, with 6–9 participants in each) were conducted in Arabic across the two sites (59 female; 59 male) **Ages**: FGD were settled according to participants' age ranges (10–12 years old, 13–14 years old; Additionally perspectives of adolescents of 15–16 years old and adults of 35– 45 years old were convened to address their perspectives on the needs and risks of these adolescents) **Country of origin**: Syria	Lebanon	Two urban areas located close to each other in the Beka'a valley that has a large concentration of Syrian refugees	**Qualitative** descriptive design. Methodologies applied included focus group discussions (FGDs), community mapping and photo elicitation interviews (PEI)	**Factors hindering well-being:** Barriers in education, bullying, perception of unsafety (specially for girls), acculturation (gender roles), economic strain, child marriage (for protection), psychological distress/mental health, poor living conditions, low access to sexual and reproductive health information	N/A	Psychological well-being	**Journal article** Conflict and Health
Deveci, Y. (2012)	Refugee children	Girl 15 years, victim of trafficking, unaccompanied asylum seeker from Benin. Girl 16 years old, victim	United Kingdom	Separated children under care of local authorities subject to UK	**Qualitative**. Case studies	**Factors fostering well-being:** personal resources (resilience, social skills, hope in	N/A	Psychological well-being	**Journal article** Journal of Social Work Practice

		of abuse, unaccompanied asylum seeker from Congo. Boy 16 years, unaccompanied asylum seeker from Afghanistan		immigration control. Foster		future, engage in learning, other regular activities providing structure, promotion of a secure base, educational success, friendships that have a positive impact, nurturing talents and interests, promoting positive values, being and becoming socially competent **Factors hindering well-being:** victim of trafficking , victim of physical, sexual and emotional abuse, uncertain migration status, perception of unsafety, perception of prejudice, loneliness, isolation, low access to sexual and reproductive health information, trauma			
Ekblad, S. (1993)	Refugee children	n = 66 children (33 female; 33 male) and their parents (mostly mothers) **Ages**: 5-15 years (42% preschool; 58% school age) **County of origin:** mothers from former Yugoslavia (56% Bosnia-Herzegovina, 29%	Sweden	Refugee camp	**Quantitative** descriptive design. Methodologies applied included a survey	**Factors fostering well-being:** an optimistic mother, social support **Factors hindering well-being:** experience of direct violence, apathetic or unstable mother, long time in	N/A	Psychological well-being	**Journal article** Stress Medicine

		Serbia, the rest from Montenegro, Croatia and Kosovo) **Length of stay:** on average about 5 months				Sweden, higher education level among fathers (frustration), lack of proper information about flight, somatic symptoms, depression, homesickness, reduced interest in school			
Foka, S., Hadfield, K., Pluess, M., & Mareschal, I. (2020)	Refugee children	n = 72 children in three refugee camps (Kara Tepe n =54, Caritas n = 11, and Pikpa n =7) **Ages**: 7-14 years **Country of origin**: Syria (41), Iraq (13), Afghanistan (13), Lebanon (1), Kurdistan (1)	Greece	Refugee Camp in Lesvos with basic services	**Mixed methods**. Sequential explanatory design. Methodologies applied included a quasi-randomised, wait-list intervention with questionnaire measures (WHO-5, Lifespan Self-Esteem Scale, Youth Life Orientation Test, CES-DC) and focus groups.	**Factors fostering well-being:** preventive psychosocial intervention to improve resilience and well-being (tackling positive emotions, optimistic thinking, character strengths, positive relationships, mindfulness)	Treatment group vs control group (waitlist)	Well-being and depressive symptoms	**Journal article** Development and Psycho-pathology
