Supplementary Table. The Newcastle-Ottawa Scale to evaluate risk of bias in three domains for observational studies

Study	Selection				Comparability		Outcome or exposure			Total score
	Representativeness of exposed cohort	Selection of non-exposed cohort	Ascertainment of exposure	Demonstration that outcome of interest was not present at start of study	Comparability of cohorts on the basis of the design or analysis		Assessment of outcome	Was follow-up long enough for outcomes to occur (for cohort studies)	Adequacy of follow-up of cohorts	
					Controls for X	Controls for Y		Same method of exposure ascertainment for cases and controls
