Supplementary file 2. Variables that were captured using the structured data extraction tool.

Variable	Description
	General
Author(s)	Study authors
Date	Year of publication
Title	Title of publication
Country	Study location (country)
Region	Study location (region)
	Sample
Eligibility criteria	Inclusion and exclusion criteria for participants
Homeless population	Subgroup of homeless population that is of interest to the study
Sample size	Number of participants in sample
Age range	Age distribution of participants
Mean age	Average age of participants
	Study Design
Study aim	Main objectives of the study
Recruitment	Recruitment methods used in study
Research design	Type of study design
Randomization	Random assignment of participants to groups
Masking	Groups involved in the study who are blinded to treatment assignment
Control group	Group of participants that did not receive the eHealth intervention
Study duration	Duration of time between study start date and completion date
Assessments	Time point of assessment and measures used in the study
Compensation	Financial or material honorarium offered to participants who completed the study
Analyses	Type of methods used to analyze quantitative and qualitative data
Primary outcomes	Main outcomes assessed in the study
Secondary outcomes	Secondary outcomes assessed in the study that may be of lesser importance than primary outcomes
	Intervention
Type	Type of platform used to deliver the intervention (e.g. mobile app, computer)
Developer	Those responsible for developing the intervention

Software/Device	Type of software or device used to deliver the intervention
Access	Modes through which participants accessed the intervention
Components	Description of intervention components (e.g. content, features, functionality)
Display	Physical appearance of the intervention
Human involvement	Level of human involvement required to deliver intervention (e.g. type of assistance, level of expertise, frequency of support)
Prompts	Reminders or prompts participants received to use the intervention
Co-intervention	A secondary intervention used along with the eHealth intervention
	Findings
Loss to follow-up	Participants who dropped out of the study prematurely
Quantitative	Findings derived from numerical data and statistical analyses
Qualitative	Findings derived from narrative data (e.g. interviews, focus groups, surveys)
Implications	Implication of findings
Future research	Areas of future research
