Supplementary Table 2. GRADEpro GDT 2015 certainty-of-evidence evaluation for relative risk (RR) of seizure recurrence in people with a first unprovoked seizure (FUS) according to sleeping or waking state after 2 years of clinical follow-up

Certainty assessment							Number of patients		Effect		Certainty	Importance
Number of studies	Study design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	FUS-S	FUS-W	RR (95% CI)	Absolute risk (95% CI)		
7	Observational	Not serious	Not serious	Not serious	Not serious	None	359/626 (57.3%)	367/1033 (35.5%)	1.627 (1.463 to 1.809)	223 more per 1,000 (from 164 more to 287 more)	⨁⨁◯◯ Low	Critical

CI, confidence interval; FUS-S, FUS while sleeping; FUS-W, FUS when waking.
