Supplementary Table 3. GRADEpro GDT 2015 certainty-of-evidence evaluation for seizure recurrence rate (SRR) after 2 years of clinical follow-up in people with FUS-S and people with FUS-W

Number of studies	Certainty assessment						Effect			Certainty	Importance
	Study design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	Number of events	Number of individuals	Event rate (95% CI)		
SRR in people with FUS-S											
7	Observational	Not serious	Not serious	Not serious	Not serious	None	359	626	0.595 per 626 (0.523 to 0.663)	⨁⨁⨁⨁ High	Critical
SRR in people with FUS-W											
7	Observational	Not serious	Not serious	Not serious	Not serious	None	367	1033	0.365 per 1033 (0.309 to 0.425)	⨁⨁⨁⨁ High	Critical

CI, confidence interval; FUS, first unprovoked seizure; FUS-S, FUS while sleeping, FUS-W, FUS when waking
