S5 Table: Risk of bias assessment

Authors	Was the study's target population a close representation of the national population in relation to YFV prevalence or CFR?	Was the sampling frame a true or close representation of the target population?	Was some form of random selection used to select the sample, OR was acensus undertaken?	Were data collected directly from the subjects (as opposed to a proxy)?	Was an acceptable inclusion criteria definition used in the study?	Did the author calculate and respect the expected sample size?	Was the YFV detection assay shown to have reliability and validity?	Was the same mode of data collection used for all subjects?	Was the length of the study period > or = 1 year?	Were the numerator(s) and denominator(s) for the YFV prevalence appropriate?	Risk of bias	Species
Agwu, 2016	No	Yes	No	Not applicable	Yes	No	Yes	Yes	Unclear	Yes	Moderate risk of bias	Individual Mosquitoes
