Supplementary Table 4. Regional estimates of influenza-associated lower respiratory tract infection (LRI) episodes and hospitalizations, by age group

	All-cause estimate* (95% CI) [thousands]	Influenza-associated events (95% CI) [thousands]	Rate per 100 000 population (95% CI)
Africa			
Hospitalized LRI episodes	11,050 (6,699—17,209)	1,560 (842—2,683)	326 (176—561)
LRI episodes	34,601 (28,763—41,050)	4,884 (3,050—6,966)	1,021 (637—14,56)
Americas			
Hospitalized LRI episodes	6,635 (4,495—9,314)	936 (550—1,485)	137 (80—217)
LRI episodes	23,406 (20,334—26,777)	3,304 (2,149—4,639)	483 (314—678)
Eastern Mediterranean			
Hospitalized LRI episodes	2,950 (1,761—4,671)	416 (224—718)	107 (57—184)
LRI episodes	20,996 (17,071—25,344)	2,964 (1,874—4,284)	760 (481—1,099)
Europe			
Hospitalized LRI episodes	8,512 (5,600—12,267)	1,201 (677—1,946)	170 (96—276)
LRI episodes	22,212 (18,989—25,797)	3,135 (2,025—4,415)	444 (287—626)
Southeast Asia			
Hospitalized LRI episodes	4,446 (2,706—6,889)	628 (349—1,070)	51 (28—87)
LRI episodes	98,555 (81,841—116,740)	13,911 (8,988—19,886)	1,134 (732—1,620)
Western Pacific			
Hospitalized LRI episodes	6,376 (4,389—8,830)	900 (531—1,444)	62 (37—100)
LRI episodes	27,186 (22,860—32,100)	3,837 (2,469—5,528)	266 (171—383)

*All-cause estimates are derived from Global Burden of Disease project, adapted for 2016, among individuals 20 years and older.
