Appendix2: Inclusion and exclusion criteria for study selection

Inclusion criteria:

- Articles must be in the English language
- Articles must be original articles (reviews and book chapters are screened for the inclusion of additional original articles)
- Studies must utilize rodents
- Studies must utilize adult animals
- Articles must include serotonin (5-HT), serotonin receptors or pharmaceuticals targeting the serotonergic system
- Studies must focus on healthy nociception or peripheral neuropathic pain models
- Treatment, if given, must target the descending serotonergic system or be spinal cord stimulation.

Exclusion criteria:

- Article is not in the English language
- Article is in any other form than an original article, review or book chapter
- Human studies
- Studies using any other kind of animal than rodents
- Developmental studies
- Articles not focused on healthy nociception of chronic neuropathic pain
- Studies using a disease model other than peripheral neuropathic pain models
- Studies using the following pain models[1,2]:
    - Inflammatory pain models, including the formalin model
    - Cancer pain models
    - Arthritic (joint) pain models
    - Muscle pain models
    - Postoperative pain models
    - Visceral pain models
    - Headache and migraine models
    - Viral neuropathy models
    - Drug- or treatment-induced pain models
    - Functional pain syndrome models
    - Stress-induced hyperalgesia models
    - Central pain models:
        - Spinal cord injury models
        - Traumatic brain injury models
        - Excitotoxicity models for stroke injury
