Supplementary Figure 9: Association between effect size in tDCS groups as assessed by the Modified Ashworth Scale and: A) number of sessions, B) sessions per week C) session time, D) total tDCS application time, E) Current; F) electrode size, G) current density, H) charge, I) charge density, J) total charge, and K) Total charge density (TCD). A decrease in Hedge's *g* indicates a better score.
