Figure legends

Figure S1. (A). Sensitivity analysis for OS. (B). Forest plots evaluating the impact of postoperative complications on the OS of gastric carcinoma patients after removing a study with potential heterogeneity (Li et al, 2013).

Figure S2. (A). Forest plots evaluating the impact of postoperative complications on the prognosis of gastric carcinoma patients. (A): for recurrence-free survival (RFS); (B): for cancer-specific survival (CSS).

Figure S3. (A). Effect of postoperative complications with Clavien-Dindo grade ≥II on RFS of gastric carcinoma patients; (B). Effect of infectious complications on RFS of gastric carcinoma patients; (C). Effect of intra-abdominal infectious complications on RFS of gastric carcinoma patients; (D). Effect of anastomotic leakage on CSS of gastric carcinoma patients.
