Supplementary Fig S1. Summary forest plot matrices for all of the primary (A-L) and secondary (M-N) outcomes. These matrices are consisted of the forest plots (below the diagonals) as well as the estimated effect sizes (above the diagonals) for pairwise meta-analyses and NMA, the SUCRA curves (along the diagonals ordered by SUCRA values), and the between-study variance (τ^2). The forest plots for NMA are shown in blue, while the forest plots for pairwise meta-analysis are shown in purple. And the estimated effect sizes for NMA and pairwise meta-analysis are shown in black and gray, respectively. All of the significant comparisons are enclosed by red boxes. Abbreviations: NMA= network meta-analysis; CrI= credible interval; PI= prediction interval; abbreviations as well as the corresponding description of the interventions are available in Table 2.

Fig S1A

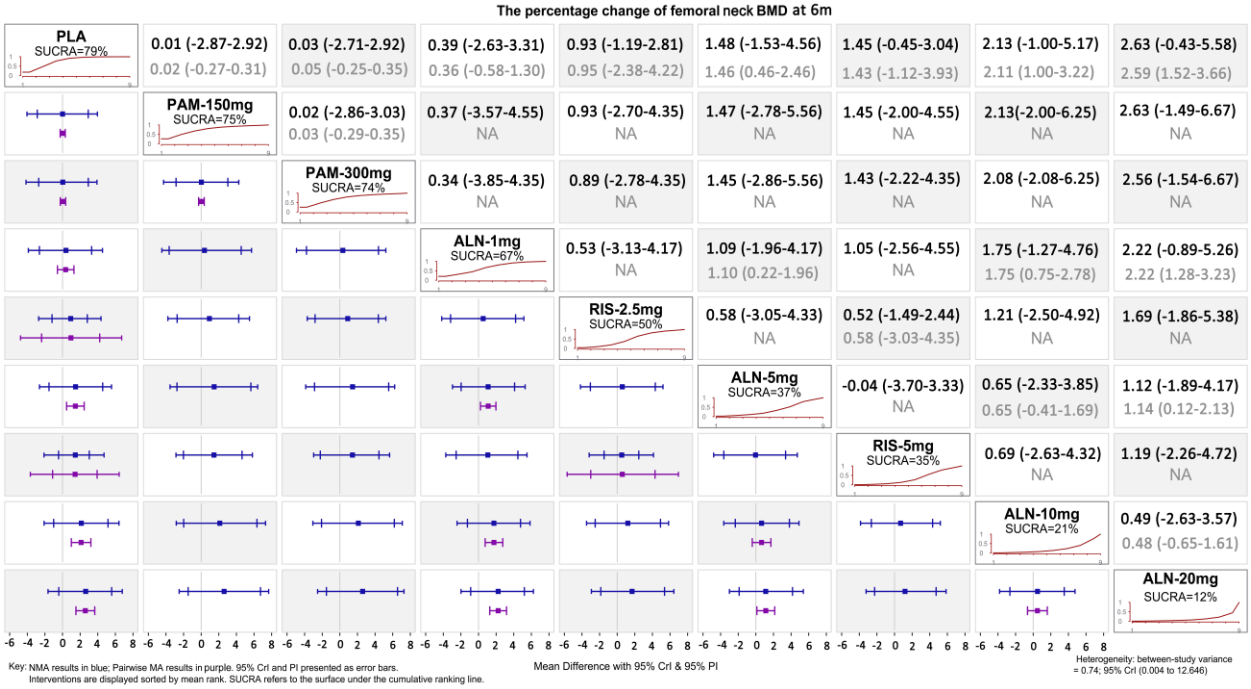

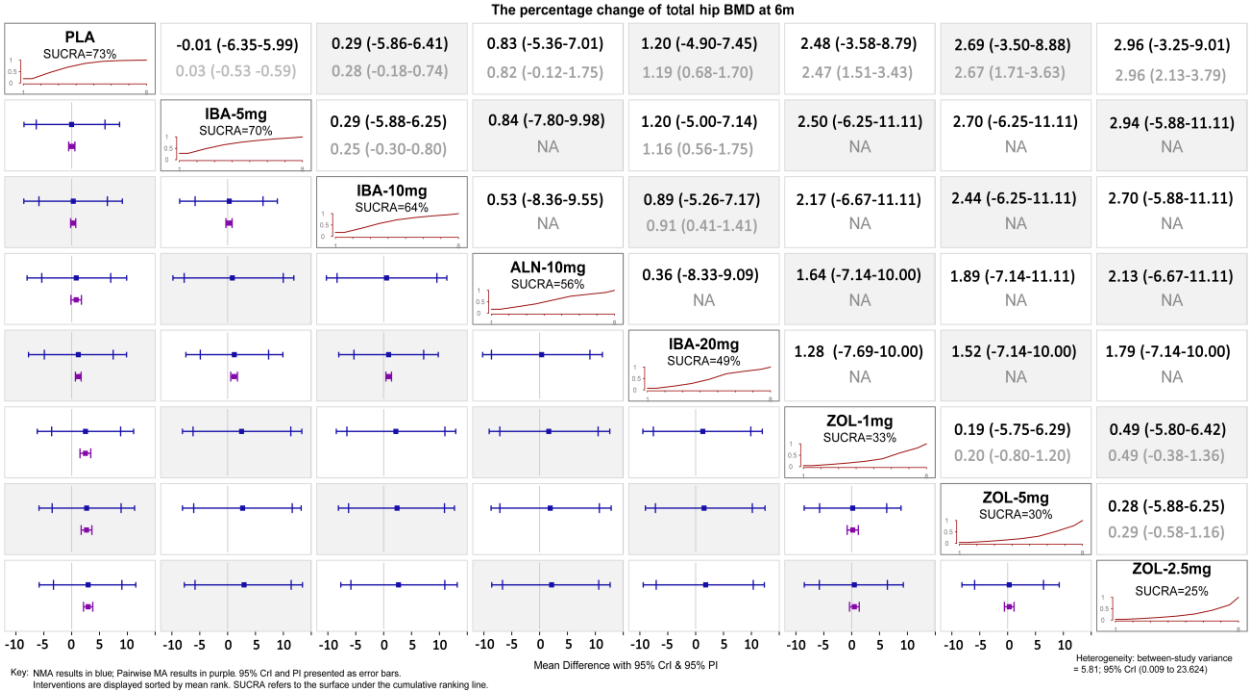

Fig S1B

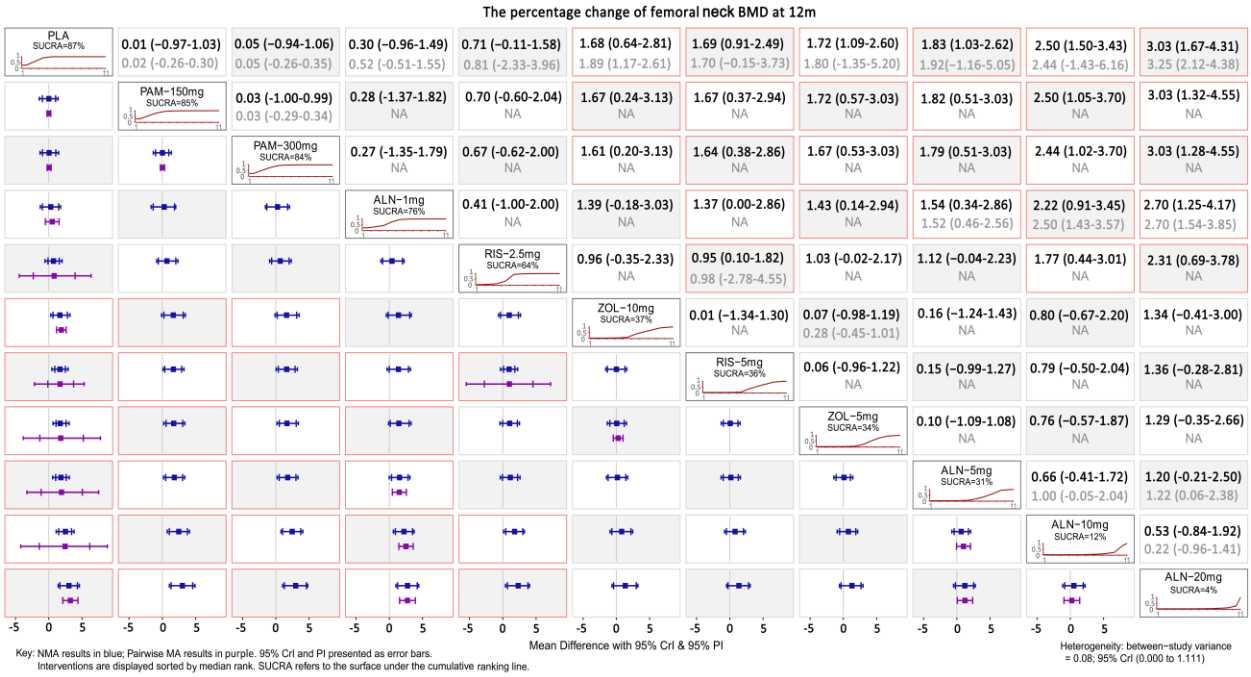

Key: NMA results in blue; Pairwise MA results in purple. 95% CrI and PI presented as error bars.
Interventions are displayed sorted by mean rank. SUCRA refers to the surface under the cumulative ranking line.

Fig S1C

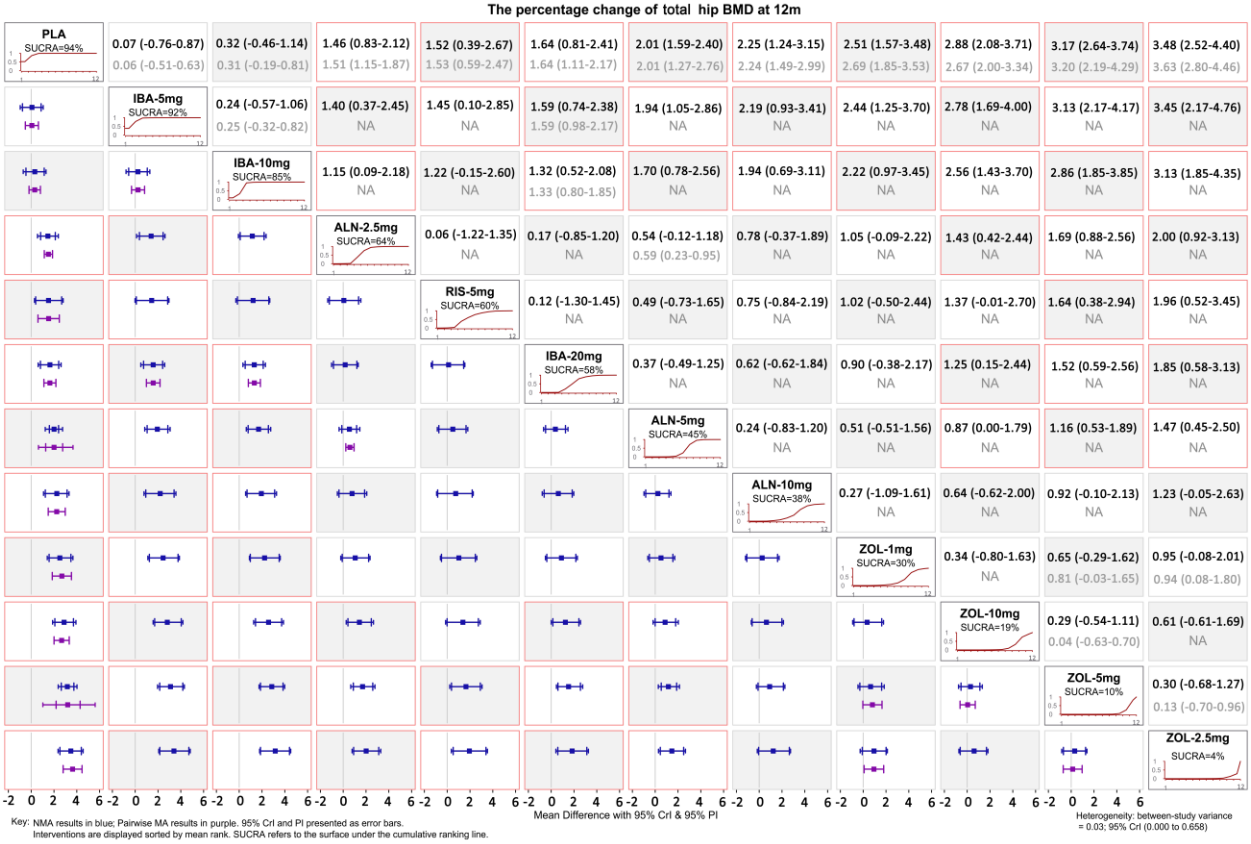

Key: NMA results in blue; Pairwise MA results in purple. 95% CrI and PI presented as error bars.
Interventions are displayed sorted by mean rank. SUCRA refers to the surface under the cumulative ranking line.

Fig S1D

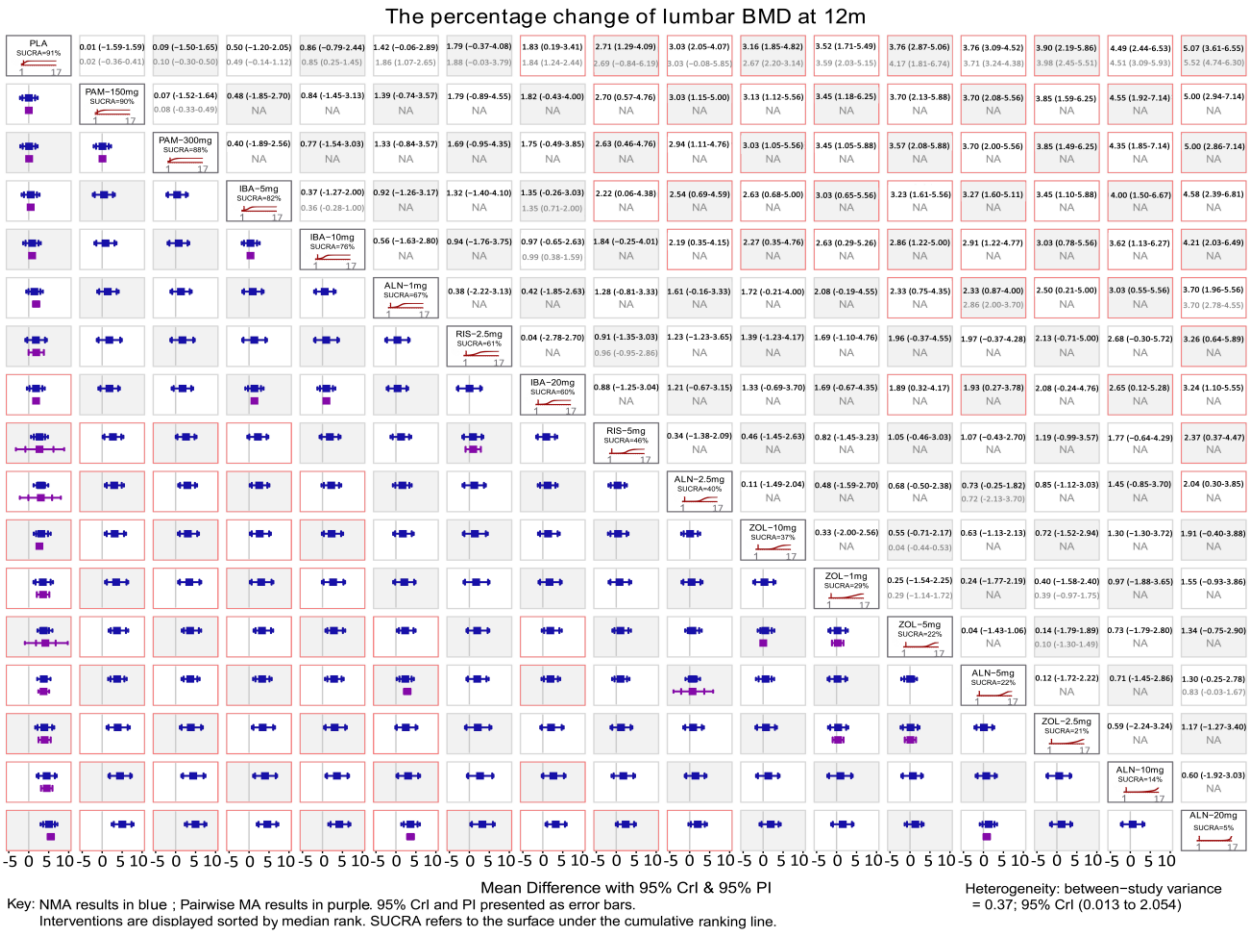

Key: NMA results in blue; Pairwise MA results in purple. 95% CrI and PI presented as error bars.
Interventions are displayed sorted by median rank. SUCRA refers to the surface under the cumulative ranking line.

Fig S1E

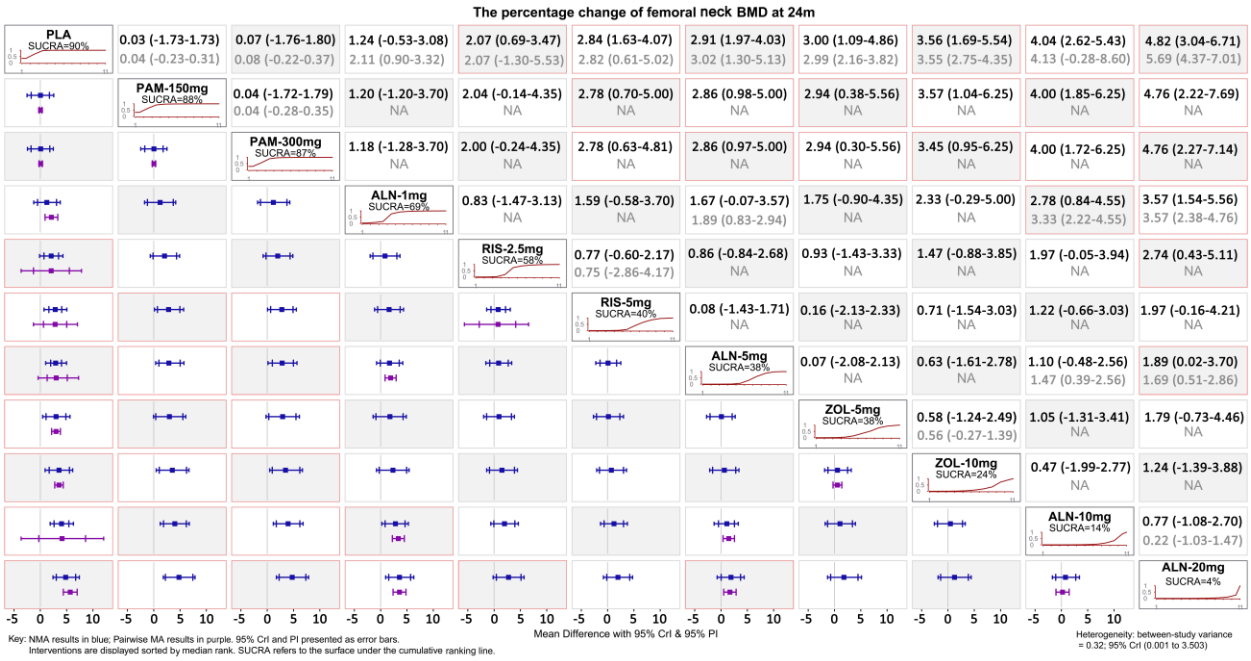

Key: NMA results in blue; Pairwise MA results in purple. 95% CrI and PI presented as error bars.
Interventions are displayed sorted by mean rank. SUCRA refers to the surface under the cumulative ranking line.

Fig S1F

Key: NMA results in blue ; Pairwise MA results in purple. 95% CrI and PI presented as error bars.
Interventions are displayed sorted by median rank. SUCRA refers to the surface under the cumulative ranking line.

Fig S1G

Key: NMA results in blue; Pairwise MA results in purple. 95% CrI and PI presented as error bars.
Interventions are displayed sorted by median rank. SUCRA refers to the surface under the cumulative ranking line.

Fig S1H

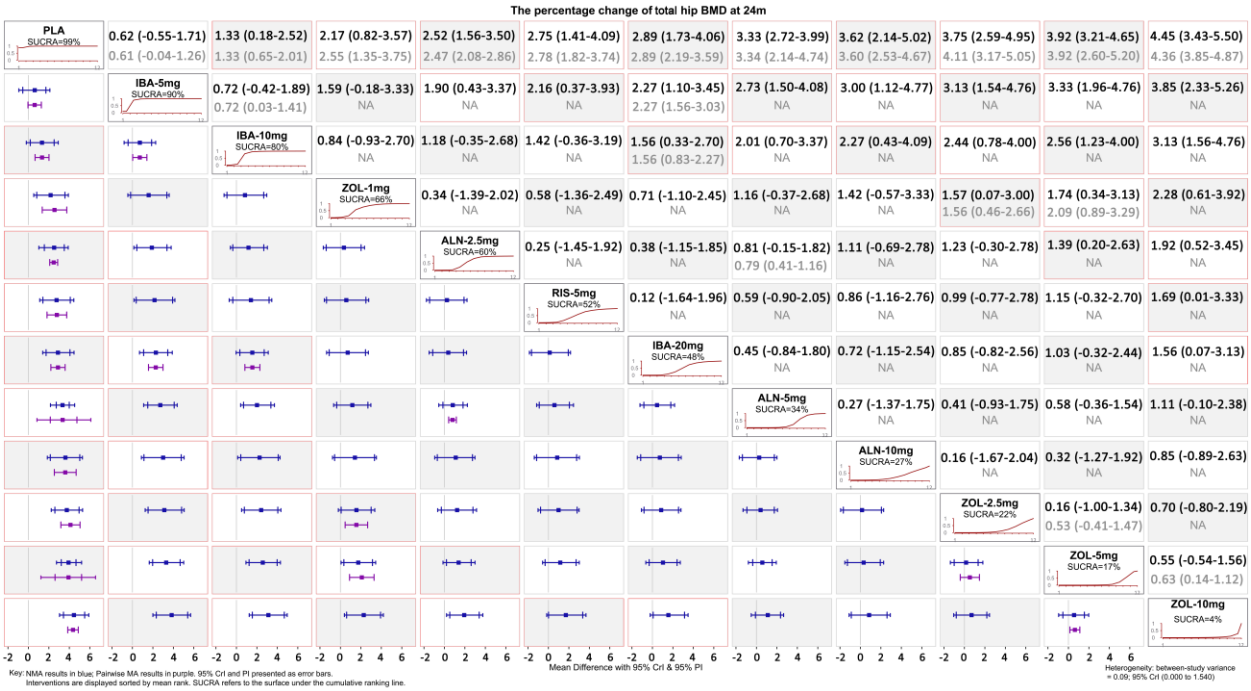

Fig S1I

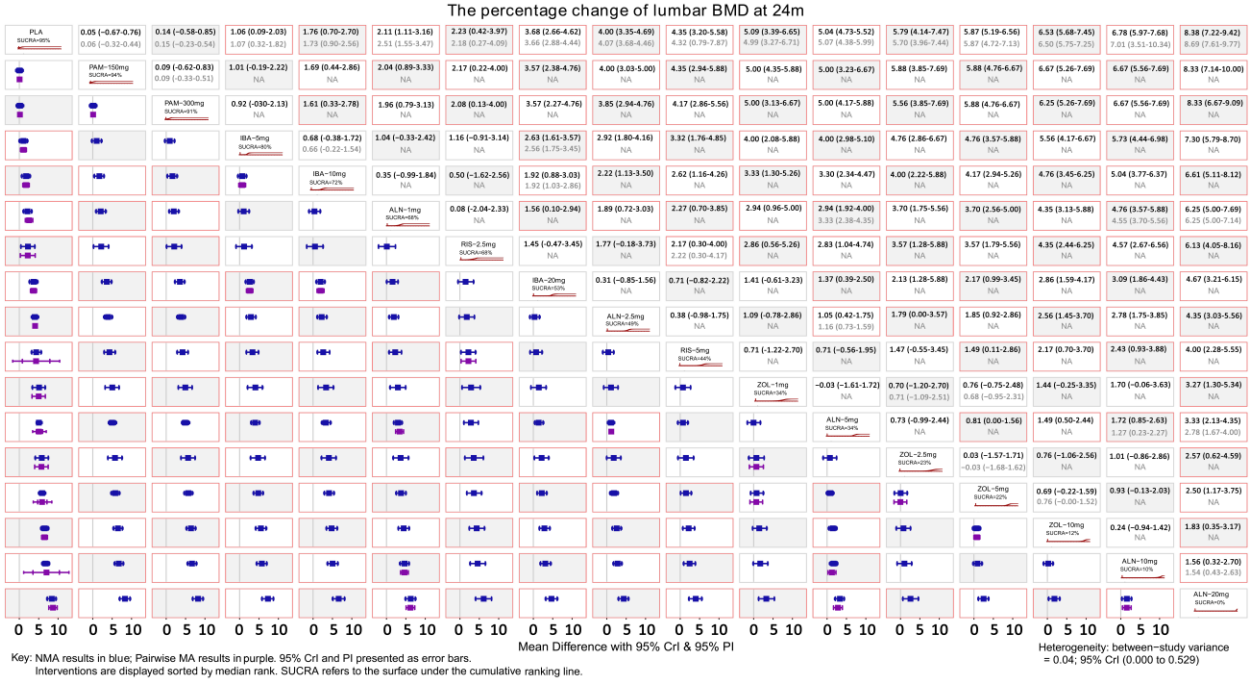

Fig S1J

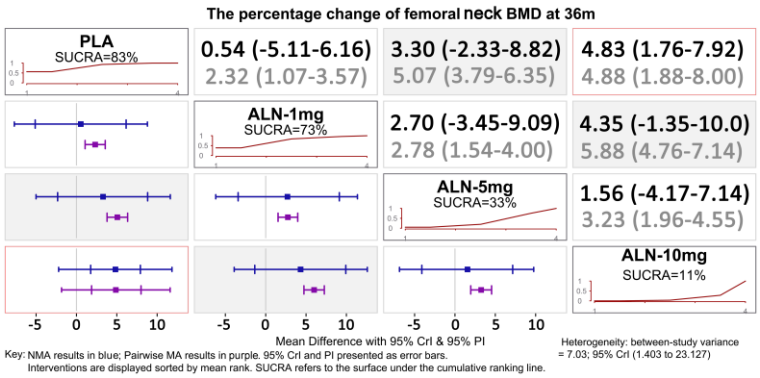

Fig S1K

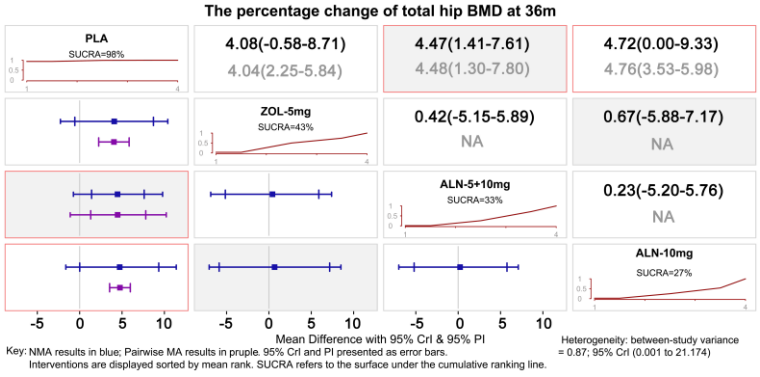

Fig S1L

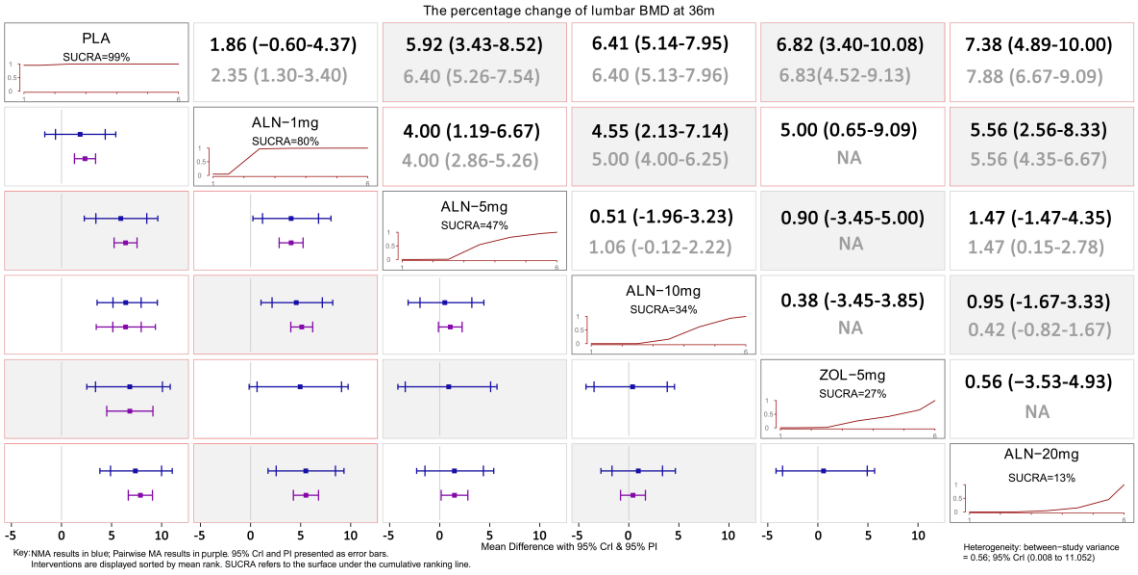

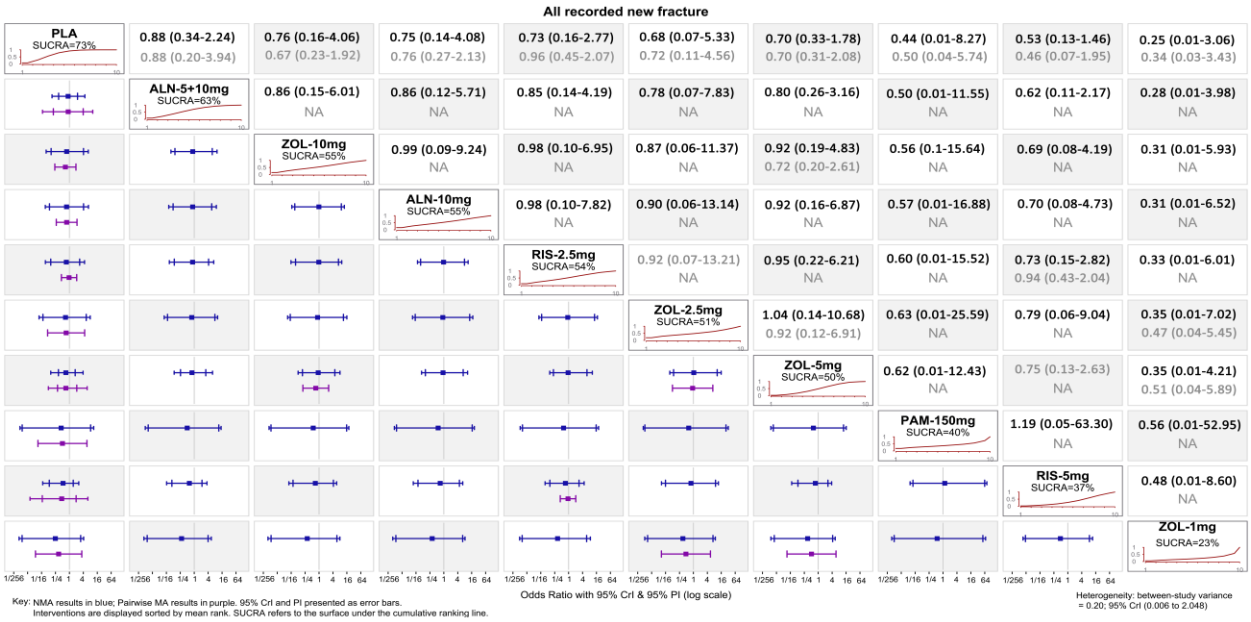

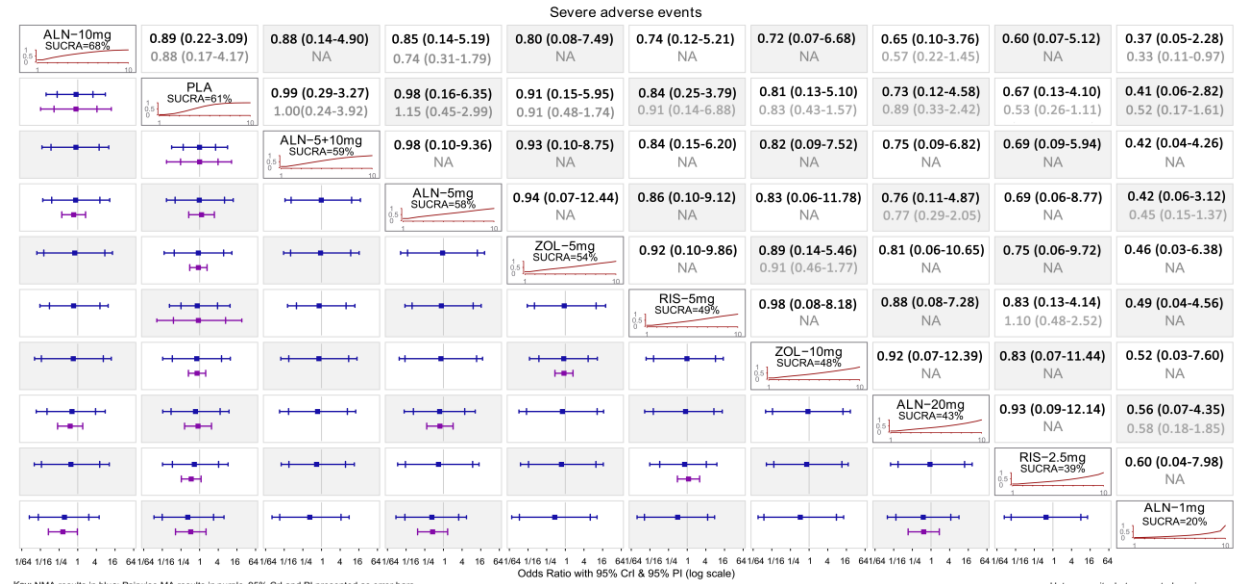

Fig S1M

Key: NMA results in blue; Pairwise MA results in purple. 95% CrI and PI presented as error bars.
Interventions are displayed sorted by mean rank. SUCRA refers to the surface under the cumulative ranking line.

Heterogeneity: between-study variance = 0.20; 95% CrI (0.006 to 2.048)

Fig S1N

Key: NMA results in blue; Pairwise MA results in purple. 95% CrI and PI presented as error bars.
Interventions are displayed sorted by median rank. SUCRA refers to the surface under the cumulative ranking line.

Heterogeneity: between−study variance = 0.29; 95% CrI (0.003 to 3.144)
