Supplementary Table1. Eligibility criteria for the present systematic review.

Domain	Inclusion criteria	Exclusion criteria
Participants	▪ Animal subjects (rodents) undergoing orthodontic/orthopaedic treatment, concerning backward movement of the mandible	▪ Primate animal species (i.e. macaca mulatta) undergoing orthodontic/orthopaedic treatment
Interventions	▪ Orthodontic/orthopaedic devices effecting posterior displacement of the mandible	
Comparisons	▪ Placebo intervention or no intervention	
Outcomes	▪ Quantitative macroscopic data regarding orthodontic/orthopaedic treatment [i.e. mandibular length change] measured mainly by radiography [lateral cephalometric radiographs, Cone Beam CT, micro-CT etc.]	▪ Histological, histochemical, immunohistochemical, qualitative assessments regarding orthodontic/orthopaedic treatment [i.e. histologic data or immunohistochemistry]
Study design	▪ Experimental prospective controlled studies (according to the Scottish Intercollegiate Guidelines Network algorithm for classifying study design (available at http://www.sign.ac.uk/ assets/study_design.pdf)	▪ Reviews, systematic reviews and meta-analyses

Supplementary Table2. Strategy for database search (up to October 2020).
