Table 1 Supplement Drug information

Drug	Target of marker	Mechanism of action	U.S. FDA approved	References
Rituximab	Anti-CD20	ADCC and CDC, cell apoptosis	No	22
Inotuzumab ozogamicin	Anti-CD22	Internalize and release calicheamicin to cleave DNA, cell apoptosis	Yes, in relapsed/refractory B-ALL	48
Epratuzumab	Anti-CD22	Internalize and modulate B-cell activation and signaling, ADCC	No	31, 49
Blinatumomab	Bispecific T engager antibody against CD19/CD3	Activate endogenous T cells to detect and destroy CD19-positive ALL blasts	Yes, in relapsed/refractory or MRD positive B-ALL	18

Abbreviations: *ADCC*, antibody-dependent cellular cytotoxicity; *ALL*, acute lymphoblastic leukemia; *CDC*, complement dependent cell; *CD*, cluster of differentiation; *DNA*, deoxyribonucleic acid; *FDA*, food and drug administration; *MRD*, minimal residual disease; *U.S.,* United States
