Appendix 2 : Inclusion and exclusion criteria from Covidence:

Inclusion

- English language articles
- All or part of the study population is in the US
- Differences by race and/or ethnicity are addressed (or the numbers to address by race are provided)
- Patients all ≥18 years of age, or if some patients <18, data for patients ≥18 presented separately
- Outcome assessed is: H. pylori infection, gastritis (of any type), intestinal metaplasia, intestinal dysplasia, or gastric cancer - may consider related outcomes (could be response to therapy, survival too)
- Primary research studies with comparison groups (case-control, RCTs)
- Prospective or retrospective studies acceptable

Exclusion

- Review articles will be flagged to check references, but will not be included in the primary analysis
- Papers where race is not used as a primary comparison
- Focus on esophageal and proximal gastric cancers
- Focus on metastatic disease
- Evaluation of clinical staging methods for gastric cancer
