**Table S6**: Estimates, their standard errors, test statistic values, p-values and 95% confidence intervals for logit transformed sensitivity and specificity of κ-FLC index dependent on assay obtained by the bivariate mixed model as well as the retransformed sensitivity and specificity estimates.

| **A) Variables in the estimation equation** | **Estimate** | **Std. Error** | **z** | **p-value** | **95% Confidence Interval** | |
|---|---|---|---|---|---|---|
| | | | | | **lower limit** | **upper limit** |
| logit(sensitivity) (κ-FLC index) | 2.568 | 0.202 | 12.739 | **< 0.001** | 2.173 | 2.963 |
| logit(sensitivity) (difference of N Latex to Freelite) | -0.883 | 0.252 | -3.502 | **< 0.001** | -1.378 | -0.389 |
| logit(1- specificity) (κ-FLC index) | -2.234 | 0.217 | -10.291 | **< 0.001** | -2.660 | -1.809 |
| logit(1-specificity) (difference of N Latex to Freelite) | 0.380 | 0.271 | 1.400 | 0.162 | -0.152 | 0.912 |

Note: The reference is N Latex.

| **B)** | **Assay** | **Sensitivity (estimated mean)** | **Specificity (estimated mean)** |
|---|---|---|---|
| κ-FLC index | N Latex | 0.929[a] | 0.903 |
| | Freelite | 0.844[a] | 0.865 |

Note: [a] this difference is statistically significant ($p < 0.001$).

Legend: The bivariate mixed model is computed with the logit-transformed quantities of sensitivity and specificity and estimated via REML (restricted maximum likelihood), these estimates are provided in A). After re-transformation the quantities are easier to interpret and given in B).

*Abbreviations*: FLC, free light chain
