Supplemental tables

Criteria	Value
Study design	2. Prospective cohort study. 1. Retrospective cohort study. 0. Other study design.
Patient inclusion	1. Clear and clinically relevant defined inclusion and exclusion criteria. 0. Unclear defined inclusion and exclusion criteria.
Patient characteristics	1. Clearly described patient characteristics. 0. Unclearly described patient characteristics.
Selection bias	1. No important patient groups excluded. 0. Important patient groups excluded or not mentioned/clarified.
Reproducibility	2. Test results are validated in an independent validation cohort. 1. Test results are validated in a small* validation cohort. 0. Test results are not validated in a validation cohort.
In vitro validation	2. *In vitro* validation of markers with similar EV isolation and characterization methods *in vivo* and *in vitro*. 1. *In vitro* validation of markers with different EV isolation and characterization methods *in vivo* and *in vitro*. 0. No *in vitro* validation.
End point	1. End point clear at the start of the study. 0. End point not clear at the start of the study.
Outcome	2. Clearly described outcome with no missing data. 1. Clearly described outcome but with missing data. 0. Unclearly described outcome with missing data.
Funding	1. No funding by a commercial entity reported. 0. Funding by a commercial entity reported OR no funding reported.

Supplementary Table S1. GRADE scoring with scoring range. *: small cohort: <10 patients; small validation cohort: <50% of the discovery cohort.(1)

Criteria	Score (%)	Description
Nomenclature	5.5 Adherence to MISEV guidelines 0 No adherence to MISEV guidelines	Use of operational terms for EV subtypes, unless subcellular origin has been confirmed.
Preanalytical variables	11 Described in detail 5.5 Described but not in detail. 0 Not described.	Cell culture: characterization of cells, culture and harvesting conditions. Biological fluids: collection conditions and technical details.
Isolation method	11 Reported in detail. 5.5 Reported but not in detail. 0 Not specified.	Isolation method described, with a level of detail to allow for reproducibility
Source volume & EV abundance	11 Both described quantitatively. 5.5 Either described quantitatively. 0 Not described quantitatively.	Source: number of secreting cells or volume of biofluid. EV abundance: total particle number and/or protein or lipid content.
EV-enriched proteins	11 ≥3 proteins analyzed. 5.5 <3 proteins analyzed. 0 Not analyzed.	Positive protein markers of EVs, including 1 transmembrane/GPI-anchored protein and 1 cytosolic/periplasmic protein with lipid or membrane protein-binding ability.
Non-EV-enriched proteins	5.5 Analyzed. 0 Not analyzed.	Negative protein marker of EVs.
Antibody & lysis buffer	5.5 Specifics described. 0 Specifics not described.	Antibody: reference, provider, clone, and dilution. Lysis buffer: composition and conditions of lysate preparation.
Single vesicle characterization	11 Quantitative and qualitative techniques. 5.5 One method for particle analysis. 0 No particle analysis reported.	Two different but complementary techniques used with all experimental details for acquisition and analysis reported.
Electron microscopy	5.5 Used/well described. 0 Not used.	EM used for evaluation of EV morphology and presence of non-EV structures.
Characterization platform	11 Described in detail. 5.5 Described but not in detail. 0 Not described.	Platform used to characterize EV cargo reported in detail.
Inclusion of controls	11 Present and described in detail. 5.5 Present, not described in detail. 0 Not described.	Use of negative/background controls to show that results can attributed to EVs.

Supplementary Table S2. PedEV scores, with detailed scoring range and descriptions.
