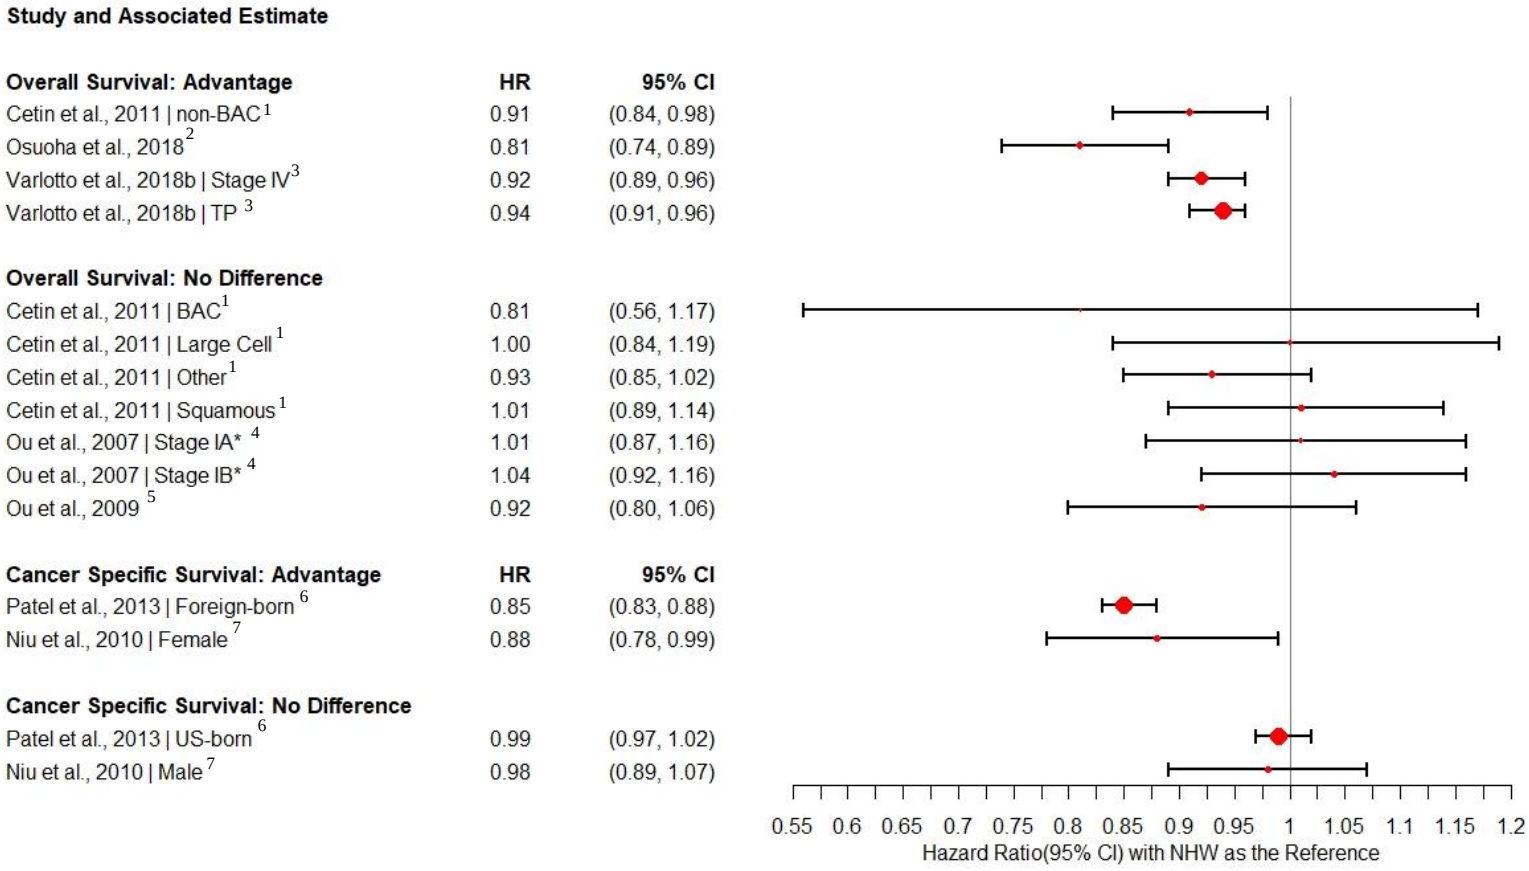
Limits: only items with abstracts, humans, English, publication date from 2000-2018

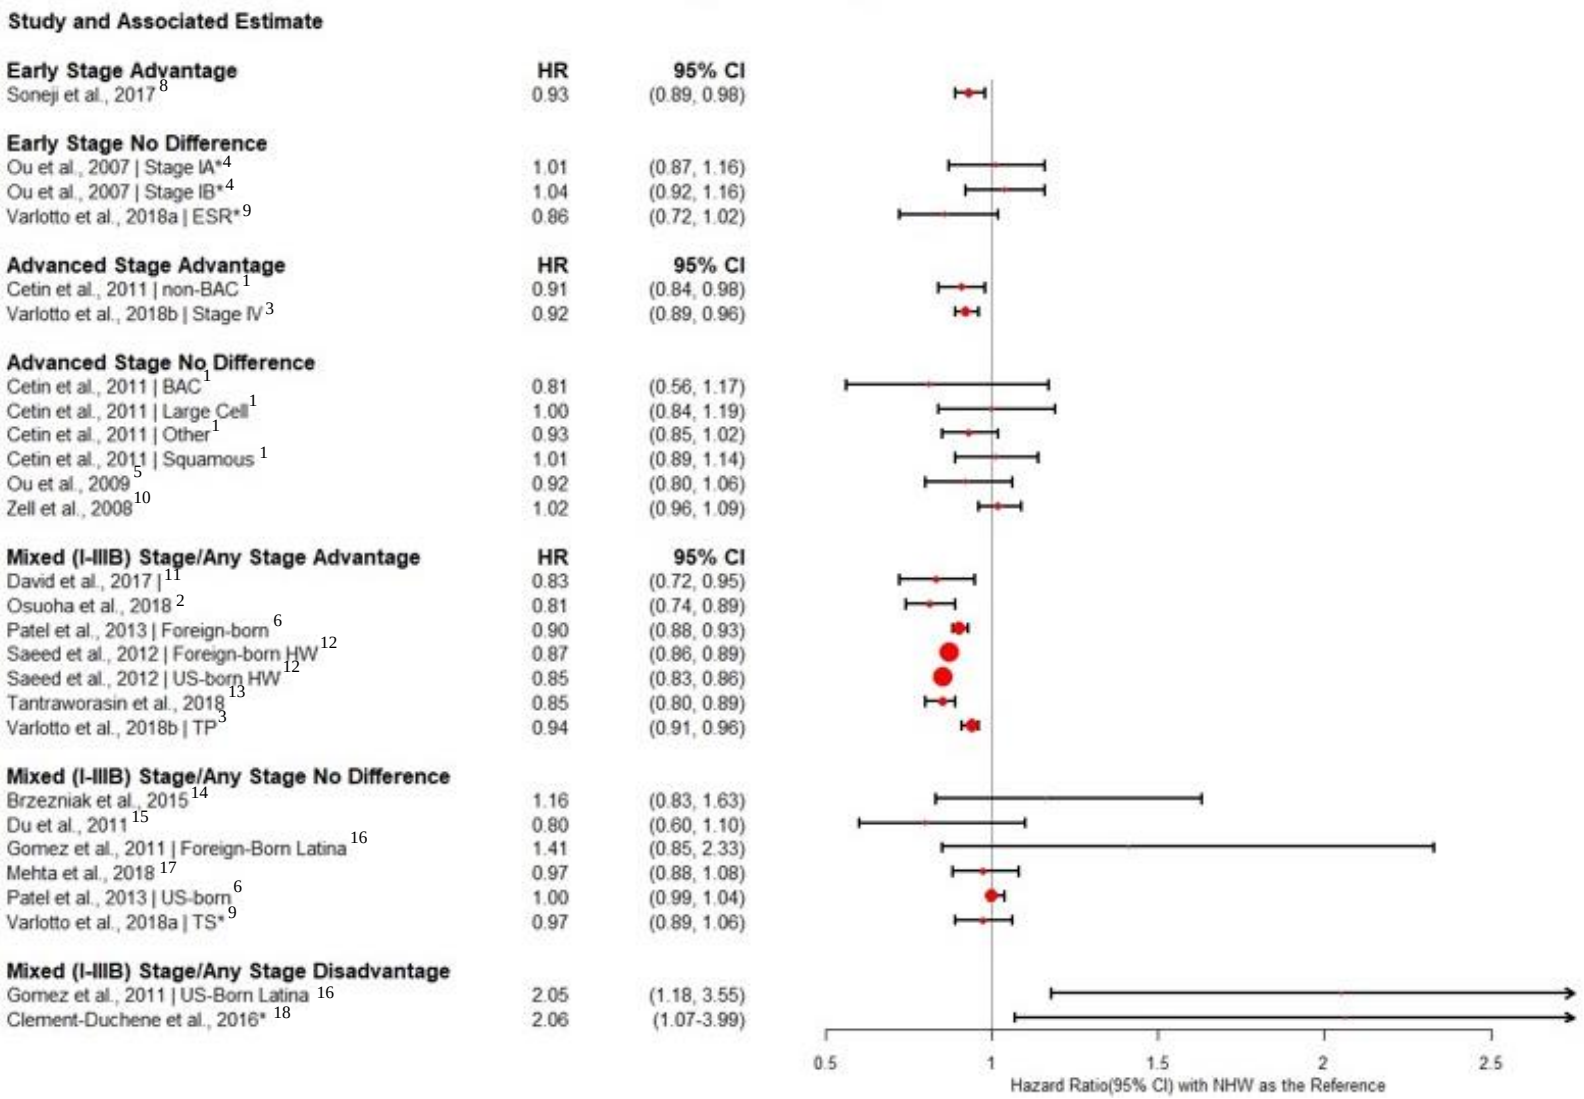
Supplementary Figure 1: Forest Plot of Overall and Cancer-Specific Survival Hazard Ratios and 95% CIs from Selected Non-Overlapping Studies.



Non-overlapping studies were determined by examining study data sources, years of data collection, and inclusion criteria. In the case were multiple studies used the same data source from partially or entirely overlapping years, we selected a combination of studies from that data source that allowed us to explore the greatest number of unique cases. Shorter confidence intervals (error bars) correspond to larger, more precise estimates. Circles correspond with effect size, with larger circles indicating a larger effect. **Asterisk** indicates the study population is entirely (or almost entirely) overlapping with another included study.

Non-BAC=non-bronchioalveolar carcinoma; TP= total population; BAC= bronchioalveolar carcinoma; US= United States

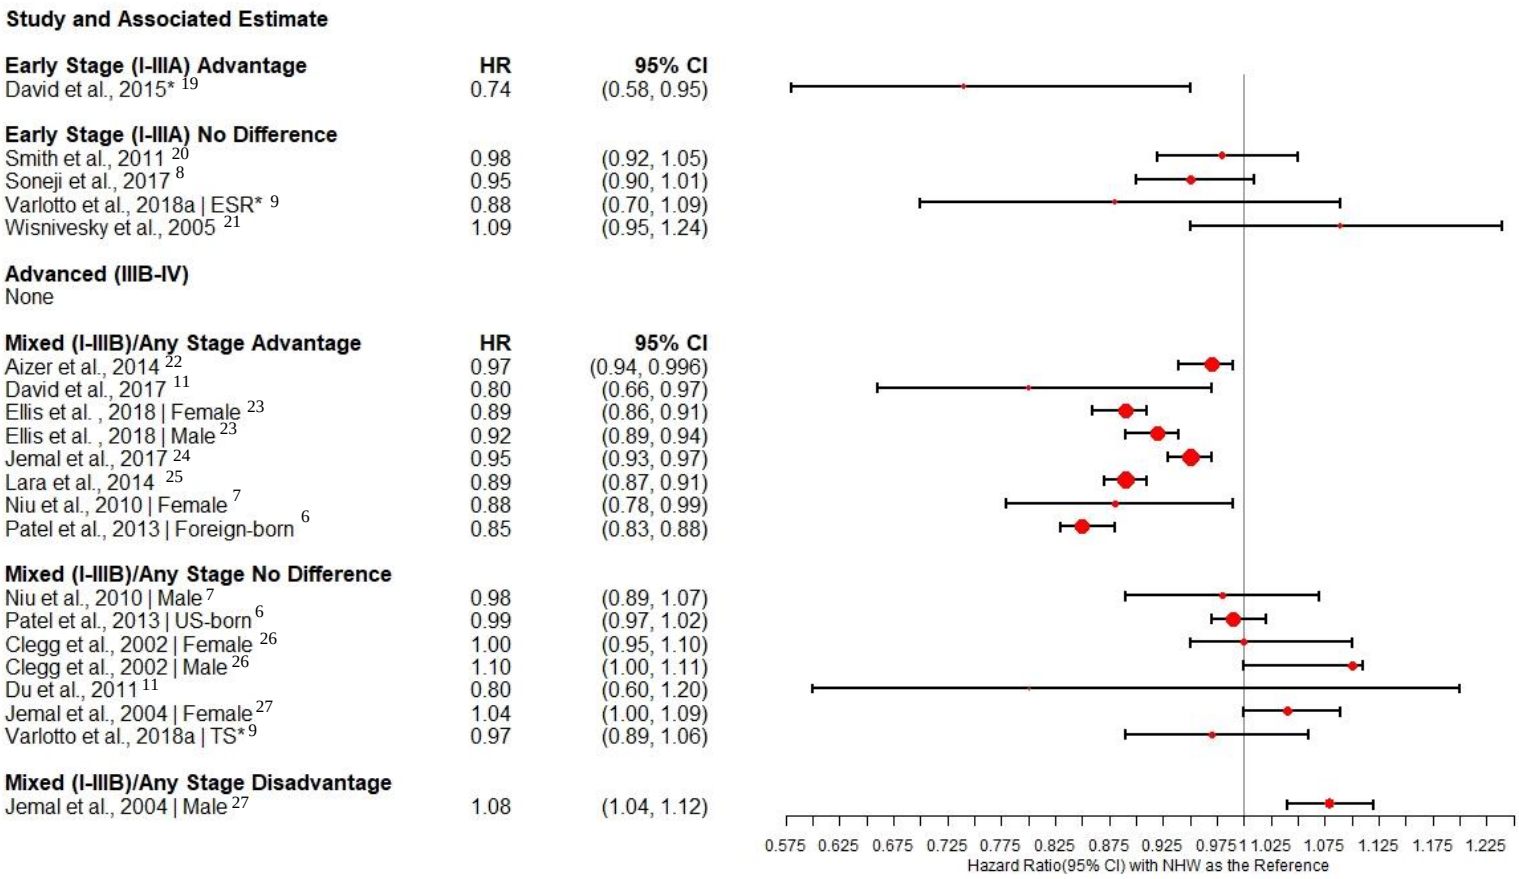
Supplementary Figure 2: Forest Plot of Overall Survival Hazard Ratios and 95% CIs by Cancer Stage.



Shorter confidence intervals (error bars) correspond to larger, more precise estimates. Circles correspond with effect size, with larger circles indicating a larger effect. **Asterisk** indicates the study population is entirely (or almost entirely) overlapping with another included study. Early stage =Stage I-IIA; Advanced Stage =Stage IIIB-IV.

ESR= Early stage resectable; non-BAC=non-bronchioalveolar carcinoma; BAC=bronchioalveolar carcinoma; US= United States; HW= Hispanic white; TP= total population; TP= total population; TS= total surgical population

Supplementary Figure 3: Forest Plot of Cancer-Specific Survival Hazard Ratios and 95% CIs by Cancer Stage.



Shorter confidence intervals (error bars) correspond to larger, more precise estimates. Circles correspond with effect size, with larger circles indicating a larger effect. **Asterisk** indicates the study population is entirely (or almost entirely) overlapping with another included study. Early stage =Stage I-IIA; Advanced Stage =Stage IIIB-IV; Mixed/Any Stage= Stage I-IIIB or any stage.

ESR= Early stage resectable; US= United States; TS= total surgical population
