Table S1 Quality assessment (risk of bias) of the studies evaluated in this review*

Reference	Nonbiased selection	High overall loss to follow-up or differential loss to follow-up?	Outcomes prespecified and defined?	Ascertainment techniques adequately described?	Nonbiased and adequate ascertainment methods?	Statistical analysis of potential confounders?	Adequate duration of follow-up?	Overall quality rating?	Comments

* Quality assessed according to the Methods guide for effectiveness and comparative effectiveness reviews of the American Agency for Healthcare Research and Quality.[31] Poor quality: study meets three or less of assessed criteria; fair valid: study meets four or five criteria; good: study meets six or more criteria.

Studies assessing obstetrical and perinatal outcomes in women with AN only.
AN = anorexia nervosa; ED = eating disorder; N/A = not applicable.
