PEER REVIEW HISTORY

BMJ Open publishes all reviews undertaken for accepted manuscripts. Reviewers are asked to complete a checklist review form (**http://bmjopen.bmj.com/site/about/resources/checklist.pdf**) and are provided with free text boxes to elaborate on their assessment. These free text comments are reproduced below.

ARTICLE DETAILS

TITLE (PROVISIONAL)	Factors affecting consultant attitudes to undertaking undergraduate medical student teaching in the UK: a systematic review
AUTHORS	Harris, Isobel; McNeilly, Heather; Benamer, Hani; Ward, Derek; Sitch, Alice; Parry, Jayne

VERSION 1 – REVIEW

REVIEWER	Helena Ward Adelaide Medical School, The University of Adelaide Australia
REVIEW RETURNED	05-Aug-2020

GENERAL COMMENTS	This is an important research area and the research question is focussed on the specific aspects of factors influencing attitudes and enagement in medical teaching. The analysis in the Results section is well explained and raises some interesting points. However, as the authors have noted, the searches resulted in only 5 articles chosen for detailed analysis. In order to ensure a comprehensive review of the topic, I recommend the authors search more widely. For instance, additional search terms such as faculty development, clinical teaching, clinical supervision could be included. it would also be useful to search more databases as some articles may be published in Higher Education journals (e.g. Stenfors-Hayes, T., et al (2010). Medical teachers' professional development: Perceived barriers and opportunities. Teaching in Higher Education, 15(4), 399–408)

REVIEWER	P Vivekananda-Schmidt University of Sheffield, UK
REVIEW RETURNED	20-Aug-2020

GENERAL COMMENTS	The manuscript will benefit from a proof read. Especially at the beginning there are minor issues with syntax and flow. The manuscript is structured well and I didn't discern any particular issues. I think its a decision for the editorial board whether they think what the manuscript communicates is worthy of publication.

REVIEWER	Andrew Hill University of Auckland, New Zealand
REVIEW RETURNED	08-Sep-2020

GENERAL COMMENTS	Thankyou for the opportunity to review this manuscript. I have the following comments: 1. This is interesting and generally well written.

	2. The main issue for me with this manuscript is the small number of papers that have been accessed. With such a small sample it is almost impossible to draw any conclusions at least in this subject area. I also think that 12 years is too short to draw any conclusions about changes over time. 3. I think that it would be more useful to look at a much broader literature from other countries over a longer period of time. 4. I also think that a more critical lens should be applied to the literature reviewed.

VERSION 1 – AUTHOR RESPONSE

Reviewer comment	Author response
Editorial comments: - Please add the dates of your systematic search to the abstract.	This has been added
- Please ensure the methods and databases mentioned in the Abstract match the main Methods section.	This has been amended
Reviewer: 1 Reviewer Name: Helena Ward	
This is an important research area and the research question is focussed on the specific aspects of factors influencing attitudes and enagement in medical teaching. The analysis in the Results section is well explained and raises some interesting points. However, as the authors have noted, the searches resulted in only 5 articles chosen for detailed analysis. In order to ensure a comprehensive review of the topic, I recommend the authors search more widely. For instance, additional search terms such as faculty development, clinical teaching, clinical supervision could be included. it would also be useful to search more databases as some articles may be pblished in Higher Education journals (e.g. Stenfors-Hayes, T., et al (2010). Medical teachers' professional development: Perceived barriers and opportunities. Teaching in Higher Education, 15(4), 399–408)	Thank you for highlighting this and the additional search suggestions. Our review set out to answer a specific question about attitudes of consultants to undertaking hospital-based undergraduate medical student teaching in the UK, and we developed our search strategy through scoping searches in order to reduce the number of irrelevant results outside of this area. This review is the first part of a wider project looking at the clinical teaching fellow post (a hospital-based teaching role) which is why our question was so specific. To add clarity about the specificity of the review question and why we were only interested in UK-based studies, a paragraph about the CTF role has been added to the introduction section and further text added the discussion section.

Thank you for the opportunity to review this manuscript. I have the following comments:	
1. This is interesting and generally well written.	No response required
2. The main issue for me with this manuscript is the small number of papers that have been accessed. With such a small sample it is almost impossible to draw any conclusions at least in this subject area. I also think that 12 years is too short to draw any conclusions about changes over time.	Thank you for highlighting this. We were surprised that there were only a small number of studies available on this topic given the role consultants play in the education of medical students and have mentioned this in the discussion section of the paper. The text has been amended in the second paragraph of the discussion section to be clear that the results of this paper are based on only the studies that were included.
3. I think that it would be more useful to look at a much broader literature from other countries over a longer period of time.	As the review set out to answer a specific question about attitudes of consultants to undertaking hospital-based undergraduate medical student teaching in the UK, we decided to exclude literature from other countries. This was particularly because we felt the precise features and arrangements for undergraduate medical education and the role/contractual position of senior hospital doctors is itself likely to be specific to the individual health system of a country. We didonsider the small number of studies from other countries however and wrote about these in the discussion section of the paper. Due to the specific nature of our question, it would not have been relevant to include broader literature. This review is the first part of a wider project looking at the clinical teaching fellow post (a hospital based teaching role) which is why our question was so specific. To add clarity about the specificity of the review question, a paragraph about the CTF role has been added to the introduction section and further text added the discussion section.
4. I also think that a more critical lens should be applied to the literature reviewed.	A further paragraph has been added to the discussion section highlighting some of the methodological limitations with the studies included in the review.

VERSION 2 – REVIEW

REVIEWER	Helena Ward Adelaide Medical School, The University of Adelaide, Australia
REVIEW RETURNED	01-Dec-2020

GENERAL COMMENTS	The points raised in my intial review have all been addressed.

REVIEWER	Andrew Hill University of Auckland New Zealand
REVIEW RETURNED	25-Nov-2020

GENERAL COMMENTS	I see no change in the fundamentals of this manuscript
