Table A.2. Decision rules for full-text screening

Criteria	Included	Excluded
(1) Original quantitative research or quantitative methods papers	- Quantitative studies - Mixed-methods studies - Original methodological papers (applied or not) which provided direction for quantitative intersectional research	- Content or discourse analyses, both qualitative and quantitative - Mixed-methods studies where intersectionality was only applied in the qualitative portion - Studies using the term intersectionality only as it applies to quantitative set theory (e.g. soft or fuzzy set theory)
(2) Explicitly applied intersectionality theory to estimate outcomes or effects at particular intersections of a population	- Studies which explicitly applied an intersectional theoretical framework	- Studies which used intersectionality as a discussion point to interpret results rather than an *a priori* theoretical framework - Intersectional perception/stereotype studies involving subjects for which perceptions of certain targets (often photographs or descriptions of people at different intersectional positions) were observed - Studies developing a measure to capture an intersectional construct (e.g., gendered-racial socialization) - Studies of intersectionality only as a subject rather than intersectionality of participants (e.g., an opinion survey to gauge intersectional consciousness)
