Working Search Methods:

The review team collaborated with a research librarian (LAC) to develop and execute a comprehensive search of the literature. This search combined controlled vocabulary and title/abstract terms related to the care of critically ill Covid-19 patients with co-infections. The Covid-19 terms were adapted from search strategies developed by expert searchers and posted on the Medical Library Association (MLA) and Covid Expert Search Strategies websites. The Covid-19 search terms were designed to retrieve studies starting in October 2019, prior to the identification of the identified case of Covid-19. The search was created in PubMed and translated in the following databases: Scopus, Web of Science, CINAHL Plus with Full-Text (Ebsco), Cochrane Central Register of Controlled Trials (Wiley). 20 articles were identified through hand searching of the literature and were added into Covidence for screening. All searches were performed on June 11, 2020. An updated search with new 2021 Covid-19 MeSH terms was run on February 8, 2021 and included records from June 12, 2021 to present.
An English language filter was applied to the results: No other publication type or date filters were applied. Results were downloaded to a citation management software (EndNote), and then imported into Covidence for de-duplication. Unique records were then screened for independent review by several project team members using a pre-determined inclusion/exclusion criteria.
