Appendix S1:

Diagnostic criteria for severe PE:

1. Systolic BP > 160 mmHg or diastolic BP > 110 mmHg on two occasions at least 4 hours apart.

2. Platelet count ＜ $100*10^9$/L.

3. Impaired liver function (Elevated concentrations of blood liver transaminases to twice normal levels and/or severe persistent epigastric pain).

4. Renal insufficiency (Serum creatinine > 1.1 mg/dl or doubling of serum creatinine in the absence of renal disease).

5. New-onset brain or visual disturbance.

6. Pulmonary edema.

Appendix S2:

Search method: Population, Intervention, Control, Outcome, Study Design (PICOS) inclusion criteria.

Population	Pregnant women with PE
Intervention	Different ABO blood groups
Control	Healthy pregnant women or pregnant women without PE
Outcomes	The association of different ABO blood groups with PE
Study design	Case-control, cohort, cross-sectional studies
