Supplementary Figure Legends

Supplementary Figure S1. Funnel plot for evaluating publication bias

Supplementary Figure S2. Sensitivity analysis of the meta-analysis

Forest plot for the sensitivity analysis. The calculation is based on a random-effects model. The results are expressed as SMD and 95% CI.

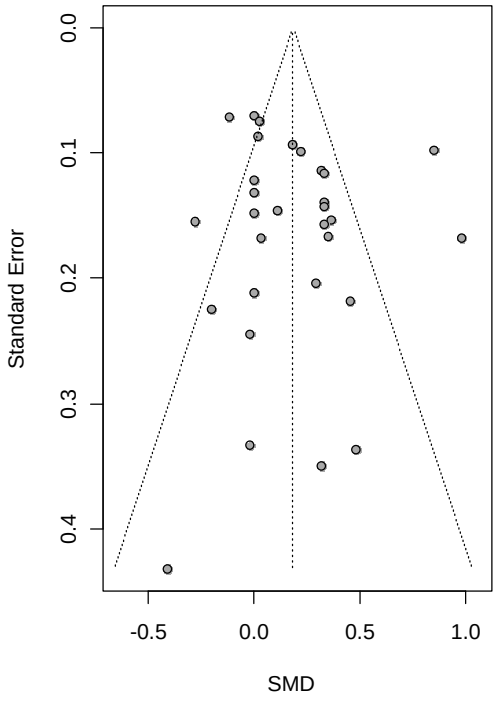

Supplementary Figure S3. Subgroup analysis of the hematocrit value according to the publication years of the studies

The studies were divided into two subgroups according to the publication year of the studies: pre-2012 group (A) and post-2012 group (B). Forest plots comparing hematocrit values between patients with OSA and controls. The results are expressed as SMD and 95% CI. OSA, obstructive sleep apnea; SMD, standardized mean difference; CI, confidence interval

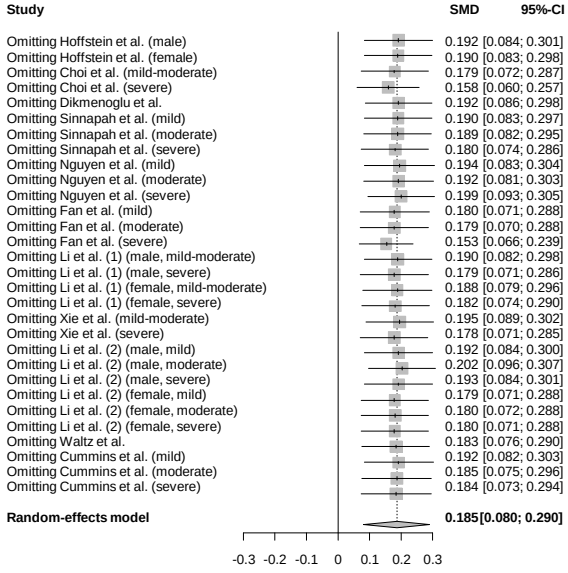

Supplementary Figure S4. Meta-regression analysis of possible confounding factors

Bubble plots of the associations between SMD and each parameter. Solid line represents inverse variance-weighted meta-regression trend line.
