Supplementary Table. Excluded Studies With Reason for Exclusion

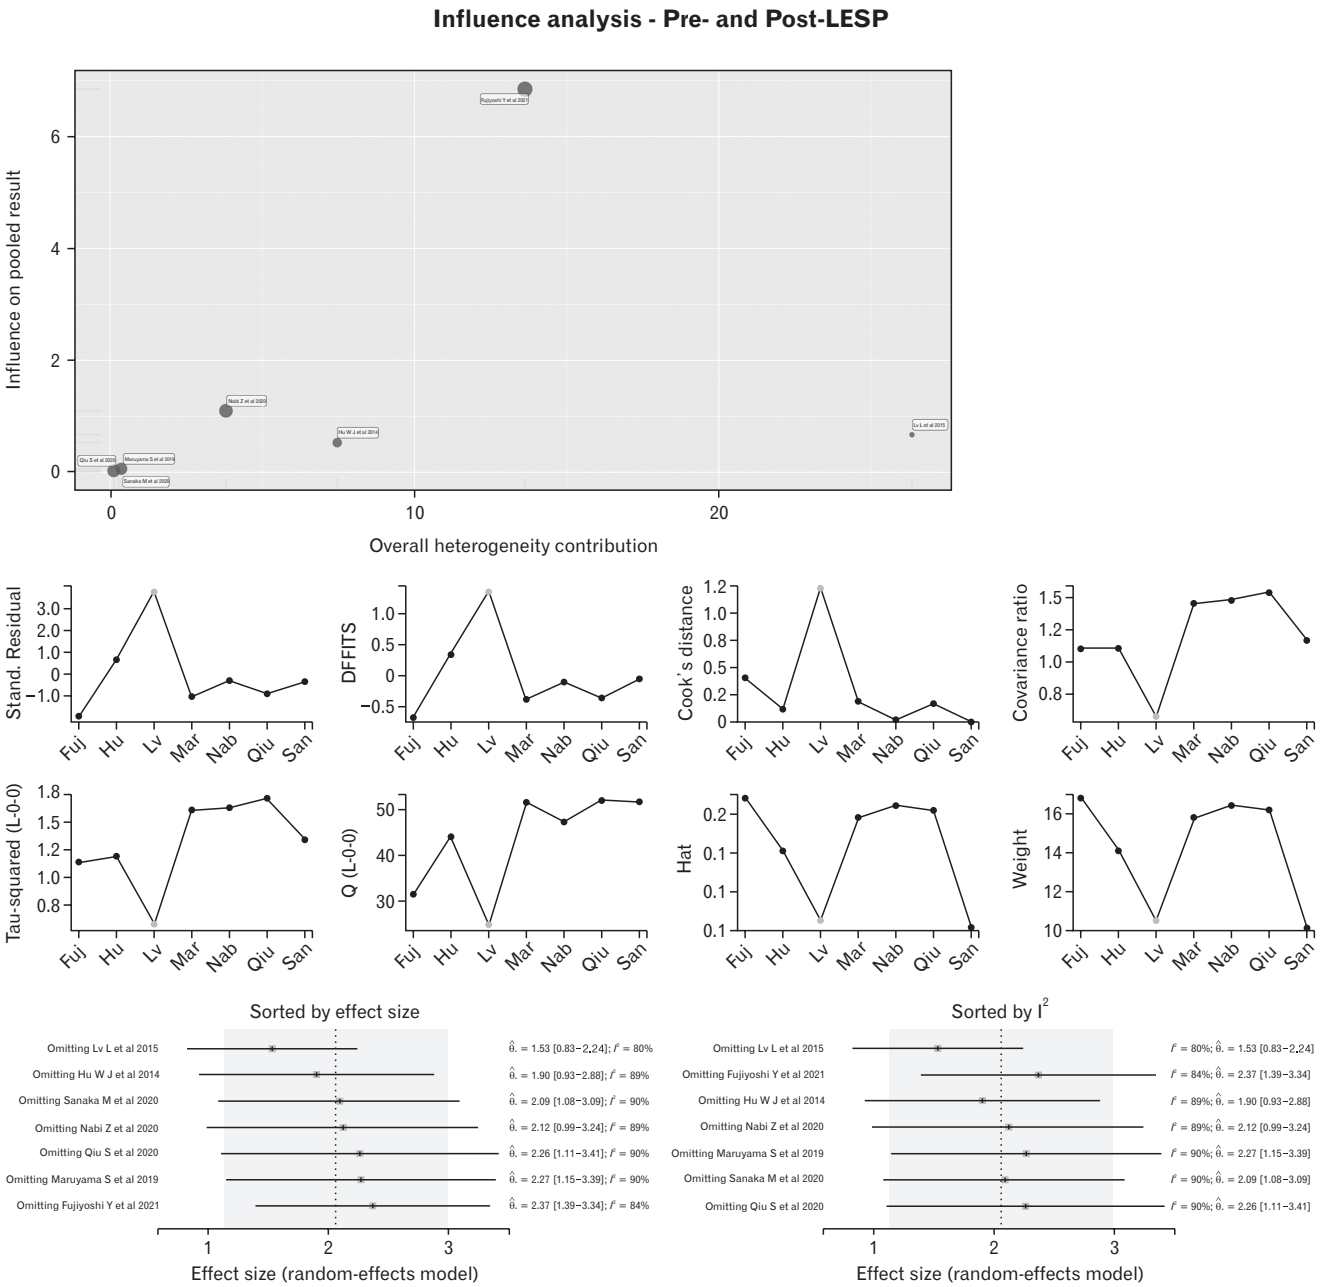

Study	Reason for exclusion
Indian Society of Gastroenterology[23]	Overlapping data with Nabi et al,[16] 2021

Supplementary Figure 1. Sensitivity analysis for the Eckardt score (ES). Qiu et al[22] study was the study with the maximum contribution to heterogeneity, and excluding the study changed the pooled effect size to 3.54 [2.62-4.46] with $I^2 = 90\%$.

Supplementary Figure 2. Sensitivity analysis for the 4-second integrated relaxation pressure (4s-IRP). Lv et al[20] was the study with maximum contribution to heterogeneity, and excluding the study changed the heterogeneity to 7% with pooled effect size of 1.22 [0.89-1.54].

Supplementary Figure 3. Sensitivity analysis for the lower esophageal sphincter pressure (LESP). Lv et al[20] was the study with maximum contribution to heterogeneity, and excluding the study changed the heterogeneity to 80% with pooled effect size of 1.53 [0.83-2.24].
