Supplementary Material, Appendix 1.

Table S1: Adapted items from CHARMS tool.
Original source: `https://doi.org/10.1371/journal.pmed.1001744`

Domain	**Key items**
Participant data	Participant eligibility and recruitment method
	Participant description
	Details of treatments received
	Study dates
	Country of origin
Outcomes	List of potential outcomes
	Definition and method for measurement of outcome
	Time of outcome occurrence or summary of duration of follow-up
	Was the outcome assessed without knowledge of the candidate predictors (i.e., blinded)?
	The outcome is useful for a prognostic or a diagnostic models?
Candidate predictors	List of candidate predictors
	Definition and method for measurement of candidate predictors
	Timing of predictor measurement
	Were predictors assessed blinded for outcome, and for each other?
Sample size	Number of participants and number of outcomes/events
Missing data	Number of participants with any missing value
	Number of participants with missing data for each predictor

Table S2: Adapted items from BIAS tool.
Original source: `https://doi.org/10.1016/j.media.2020.101796`

Domain	**Adapted questions**
Dataset description	- Is the principal objective of the dataset described?
	- Is there information about the coordinators or organizing team?
	- Is there an official website or platform hosting the data?
Dataset use	- Is the dataset open or on request?
	- Does the study include information about potential limitations?
	- Is there any reference to ethical approval?
	- Is there any usage agreement specification?
Image metadata	- Is there general information about the image, such as view or modality?
	- Is there general information about the patient?
	- Is there information about the device used for the acquisition?
	- Is there information about the acquisition protocol?
	- Is there information about the post-processing techniques?
Origin and distribution	- Is there information about the region part where the objects/subjects came from?
	- Is the dataset release as a whole or is it a training/test/set division?
	- Is an explanation about potential different distributions of the subjects with respect to real-world distribution ?
Annotation characteristics	- Is the method used to determine the annotations explained?
	- If human annotations were involved, is the number of annotations and their years of expertise indicated?
	- If there is a multiple merge annotation such as label from multiple annotators merge,it is described?
Potential error sources	- Are the most relevant possible error sources related to the images annotation indicated?
	- Are the most relevant error sources quantified? (For instance, using inter-and intra-annotator variability or giving specific information for training, validation and test cases?)
