Multimedia Appendix 5. MMAT quality appraisal profile.

Citation	First author	Year	SCREENING		1. QUALITATIVE STUDIES				
			S1. Are there clear research questions or objectives?	S2. Do the collected data allow the research questions or objectives to be addressed?	1.1. Is the qualitative approach appropriate to answer the research question?	1.2. Are the qualitative data collection methods adequate to address the research question?	1.3. Are the findings adequately derived from the data?	1.4. Is the interpretation of results sufficiently substantiated by data?	1.5. Is there coherence between qualitative data sources, collection, analysis and interpretation?

Citation	First author	Year	5. MIXED METHODS STUDIES					SCORE
			5.1. Is there an adequate rationale for using a mixed methods design to address the research question?	5.2. Are the different components of the study effectively integrated to answer the research question?	5.3. Are the outputs of the integration of qualitative and quantitative components adequately interpreted?	5.4. Are divergences and inconsistencies between quantitative and qualitative results adequately addressed?	5.5. Do the different components of the study adhere to the quality criteria of each tradition of the methods involved?	
12	Bickmore	2005	Yes	Yes	Yes	Yes	No	40%
13	Bickmore	2005	No	Yes	Yes	Yes	No	40%

Multimedia Appendix 5. MMAT quality appraisal profile.

Appraisal Instructions

1) Enter information on the papers you are appraising.
- •Citation: if you have several papers to appraise, adding a reference number can be useful.
- •First author: family name of the first author.
- •Year: year of publication of the paper.

2) Respond to the two screening questions.
- •If and thus cannot be appraised using the MMAT.

3) Choose the appropriate categories of studies to appraise.
- •For a qualitative study: choose the qualitative set of criteria (set #1).
- •For a quantitative study: choose the appropriate quantitative set of criteria (either set #2, 3 or 4).
- •If the appropriate quantitative set (either set #2, 3 or 4), and the mixed methods set (set #5).

4) Rate the criteria of the chosen category (or categories).
- •'Yes' means that the criterion is met.
- •'No' means that the criterion is not met.
- •'Can't tell' means that there is not enough information in the paper for you to judge if the criterion is met or not.

Scoring Instructions

For each retained study, an overall quality score may not be informative (in comparison to a descriptive summary using MMAT criteria), but might be calculated using the MMAT. Since there are only a few criteria for each domain, the score can be presented using descriptors such as stars (*) or %: 5***** or 100% quality criteria met; 4**** or 80% quality criteria met; 3*** or 60% quality criteria met; 2** or 40% quality criteria met; 1* or 20% quality criteria met.
For mixed methods studies, since there are 15 criteria to rate (instead of 5), the premise is that the overall quality of a combination cannot exceed the quality of its weakest component. Thus, the overall quality score is the lowest score of the study components. The score is 20% when QUAL=1, QUAN=1 or MM=1; it is 40% when QUAL=2, QUAN=2 or MM=2; it is 60% when QUAL=3, QUAN=3 or MM=3; it is 80% when QUAL=4, QUAN=4 or MM=4; and it is 100% when QUAL=5, QUAN=5, or MM=5.
