S2 Table. Key-definitions that were used for this systematic review.

Country income classification	The World Bank income classification criteria will be used to classify the countries.[34]
Index case	The first patient of active TB identified, around whom the investigation is centered. [9,10]
Close contact	A person sharing an enclosed space with the index case, in the household or not, for extended periods during the 3 months before the commencement of the TB episode.[19]
Household contact	A person living in the same household of the index case. [3]
LTBI	A person with TST induration greater than 10 mm (or the publication cut-off) in whom active TB has been excluded.[1] OR a person with a positive interferon gamma release assay (IGRA) result based on the publication cut-off.[3]
Yield of contact investigation (%)	The number of secondary cases of active TB or LTBI found divided by the number of contacts screened.[19]
Contact with confirmed active TB	A contact with smear or culture positive for *M. tuberculosis.*[1]
Subgroup analysis by geographic region	Studies will be stratified by the six World Health Organization regions. [3,35]
