Supplementary Table 2. Risk of bias assessment for individual studies using the Risk of Bias in Non-randomized Studies of Interventions tool (ROBINS-I).

| Outcome: Cancer specific survival | Risk of Bias | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| Author and year | Confounding | Participant selection | Classification of interventions | Departures from intended interventions | Missing data | Measurement of outcomes | Selection of the reported results | Overall |
| Bashaw (2014) | moderate | low | moderate | moderate | moderate | Low | Low | moderate |
| Westerman (2015) | Low | moderate | serious | Low | moderate | Low | moderate | serious |
| Thalgott (2017) | Low | Low | moderate | Low | moderate | Low | Low | moderate |

Each domain was classiffied as low risk, moderate risk, serious risk, and critical risk or no information on which to base the judgement.

An overall bias assessment was performed usign the recommendated scale.
