GRADE summary of findings table.

Outcome	Participants (studies)	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	Overall certainty of evidence
Vaspin	13 observational studies	Serious[1]	Serious[2]	Not serious	Not serious	Plausible confounding[3]	VERY LOW

[1]Serious risk of bias due to the NOS score (5-6)
[2]Serious inconsistency due to significant heterogeneity (I^2＞50%)
[3]all plausible residual confounding would reduce the demonstrated effect. Some of the studies do not match the basic information of two groups, like age, BMI and so on.
