# S4 File: Subgroup and sensitivity analyses

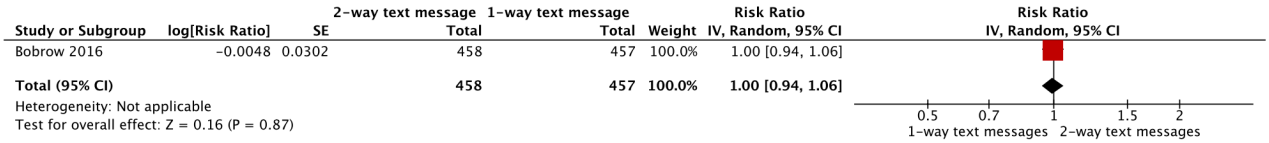

**Figure A:** Two-way text messages versus one-way text messages on appointment attendance

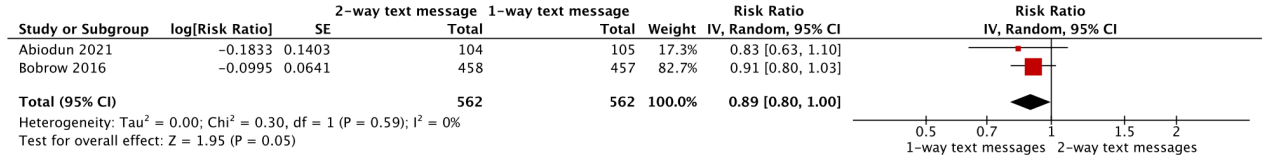

**Figure B:** Two-way text messages versus one-way text messages on medicine adherence

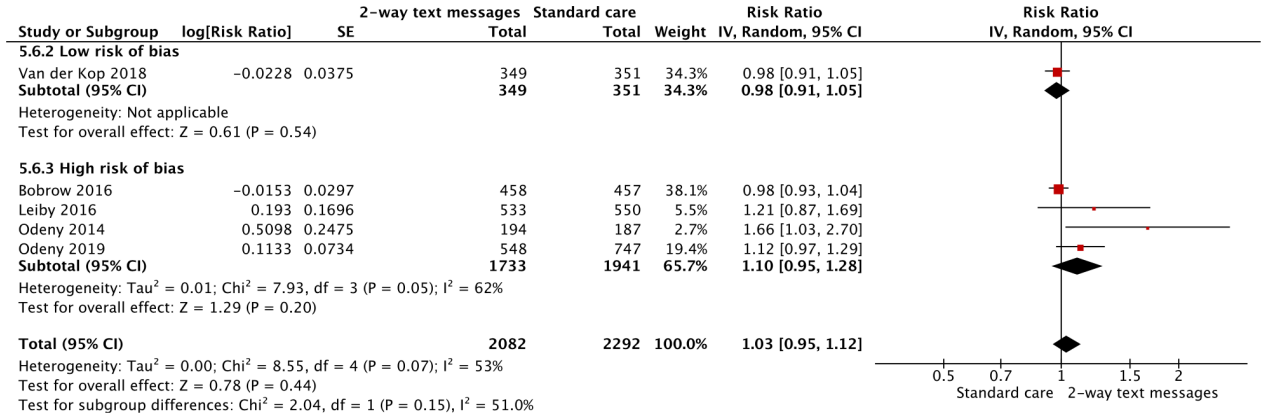

**Figure C: Subgroup analysis:** Low risk of bias versus high risk of bias on appointment attendance

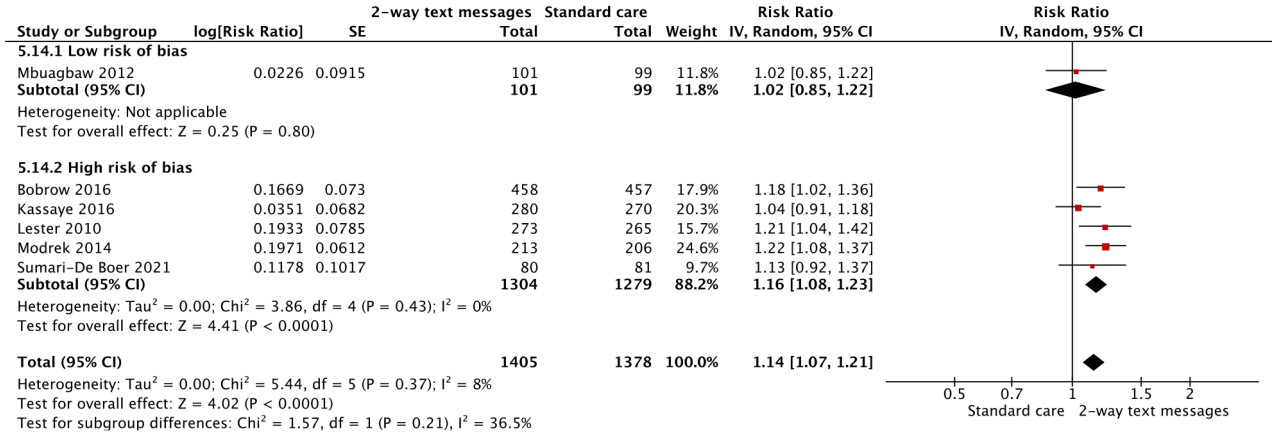

**Figure D: Subgroup analysis:** Low risk of bias versus high risk of bias on medicine adherence

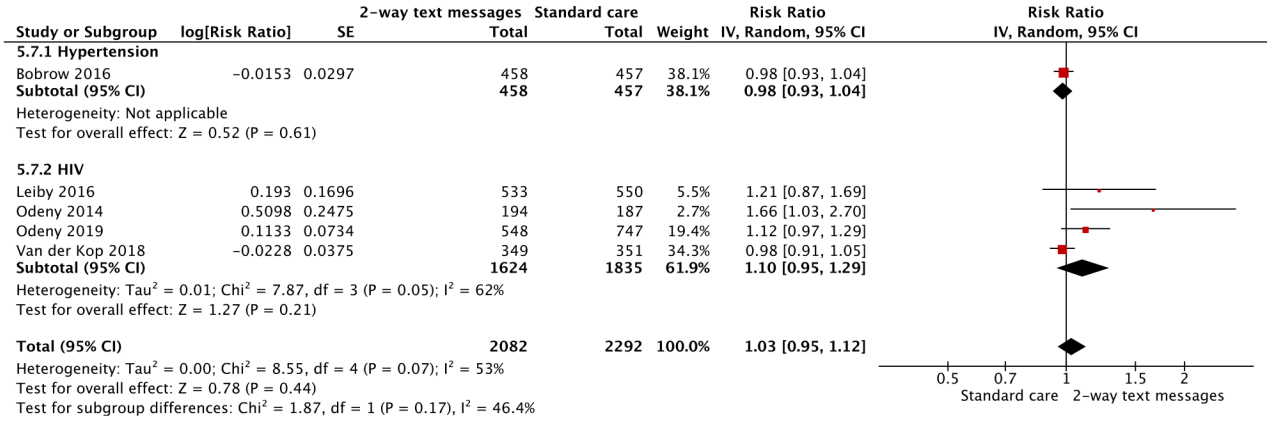

**Figure E: Subgroup analysis:** Comparison of clinical areas on appointment attendance

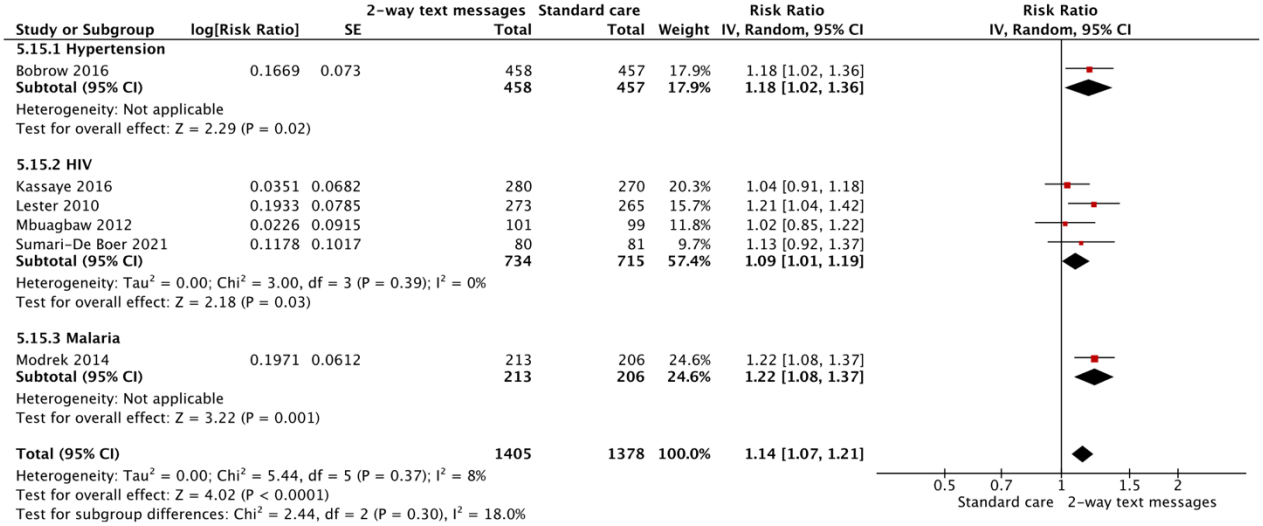

**Figure F: Subgroup analysis:** Comparison of clinical areas on medicine adherence

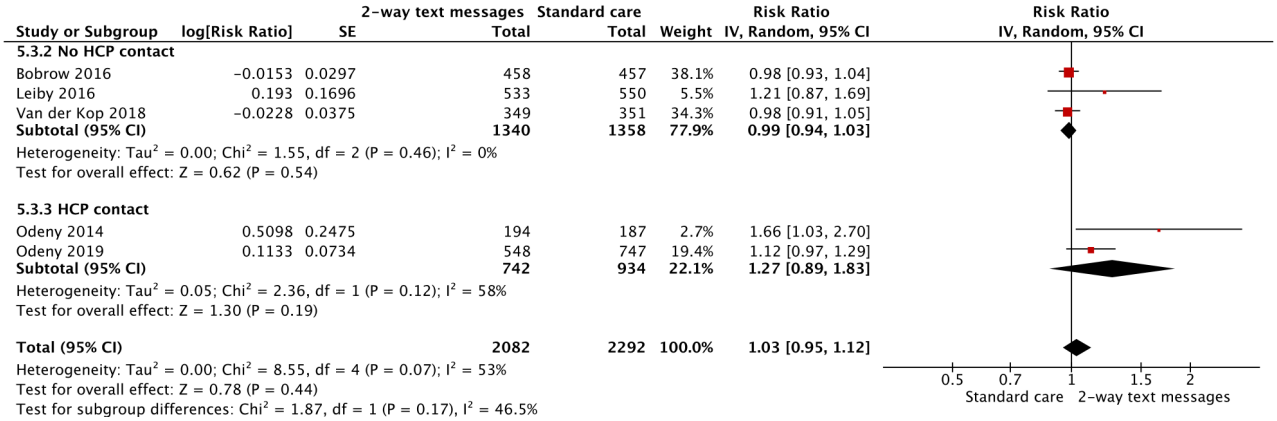

**Figure G: Subgroup analysis:** Comparison of interaction with HCP through a phone call or text message only on appointment attendance

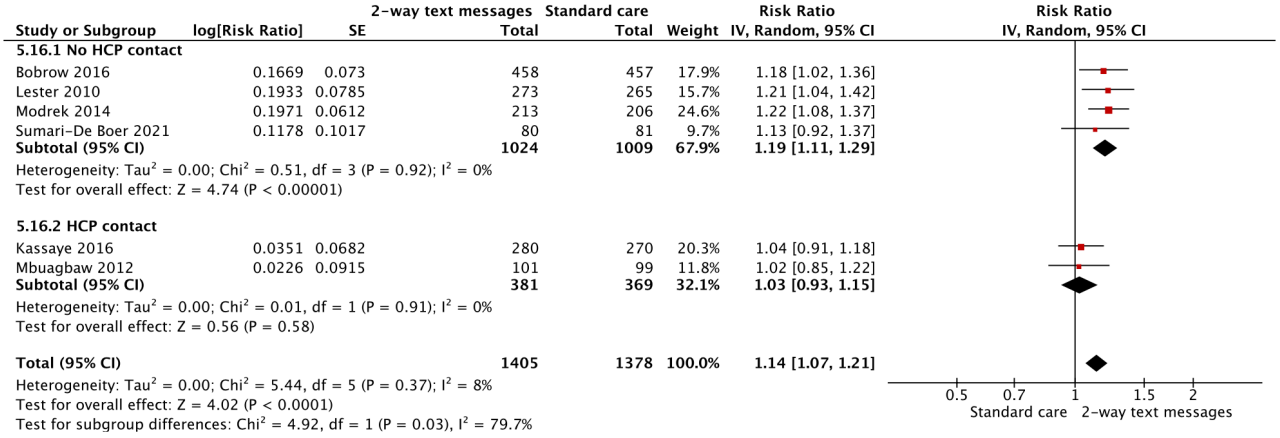

**Figure H: Subgroup analysis:** Comparison of interaction with HCP through a phone call or text message only on medicine adherence

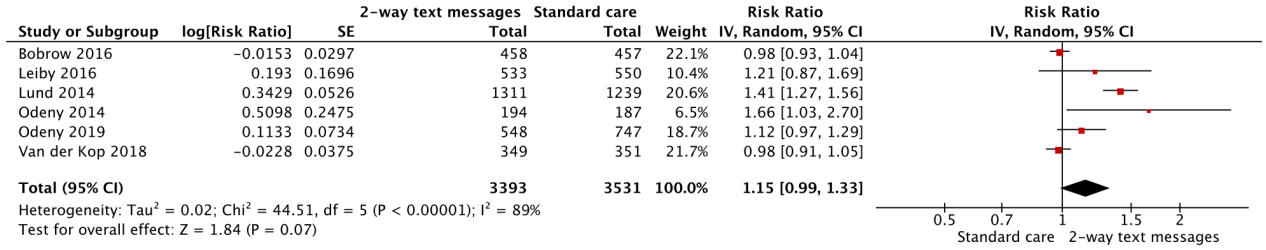

**Figure I: Sensitivity analysis:** Pooled RR on appointment attendance including Lund 2014

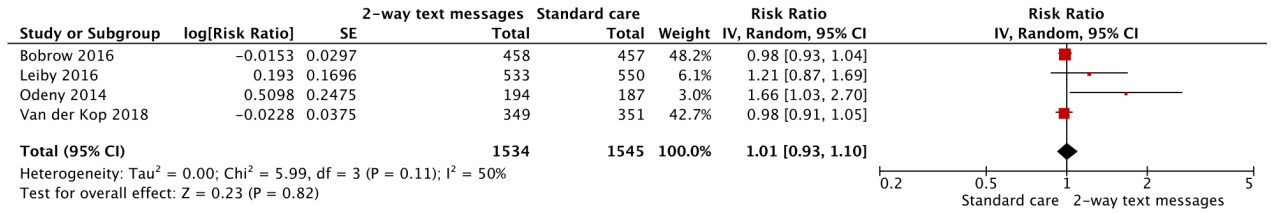

**Figure J: Sensitivity analysis:** Cluster randomized trials removed. Two-way SMS versus standard care on appointment attendance.

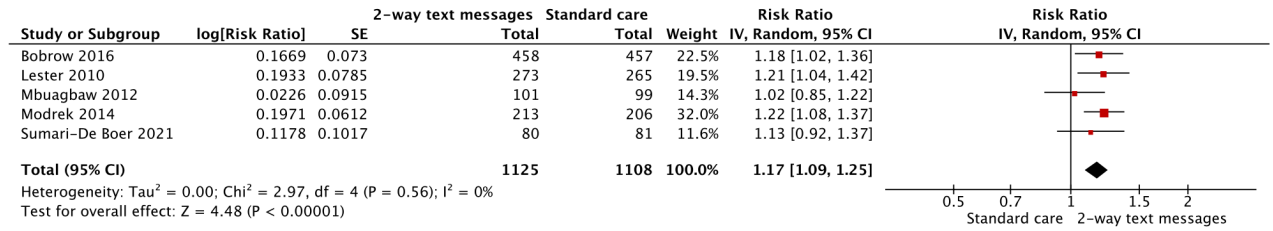

**Figure K: Sensitivity analysis:** Cluster randomized trials removed. Two-way SMS versus standard care on medicine adherence.

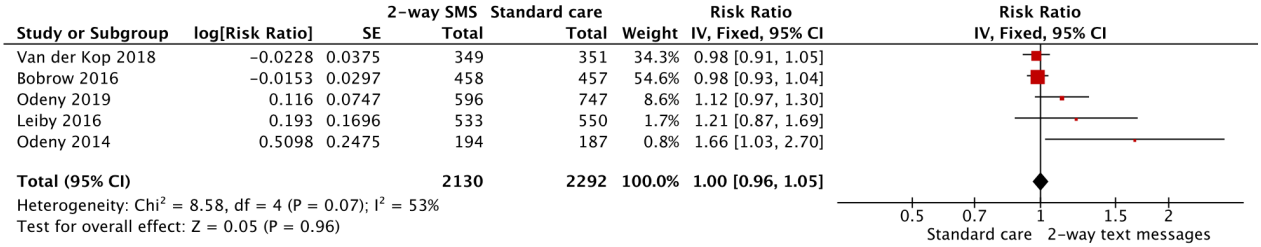

**Figure L: Sensitivity analysis:** Fixed effect model of two-way SMS versus standard care on appointment attendance.

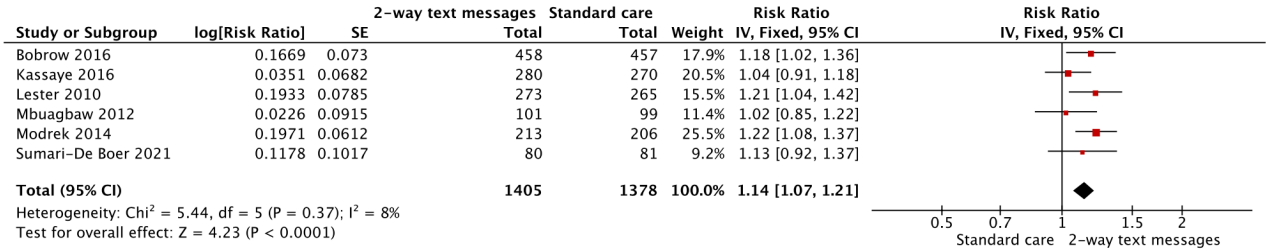

**Figure K: Sensitivity analysis:** Fixed effect model of two-way SMS versus standard care on medicine adherence
