Article title: Serum and urinary biomarkers to predict acute kidney injury in premature infants: A systematic review and meta-analysis of diagnostic accuracy
Journal name: Journal of Nephrology
Author names: Jenny Kuo, Lisa K Akison, Mark Chatfield, Peter Trnka, Karen M Moritz
Corresponding author: Prof Karen Moritz, School of Biomedical Sciences, The University of Queensland, k.moritz@uq.edu.au

Online Resource 2: Modified 10 item STARD criteria adapted from Coca et al.[1]

Item no.	Validity criterion	Explanation	Scoring
1	Participant recruitment	Was recruitment based on presenting symptoms, results from previous tests, or fact that participants received index tests	Presenting symptoms =1; Previous tests or index tests = 0
2	Participant sampling	Was the study population a convenience sample or a consecutive series?	Consecutive series = 1; Convenience sample = 0
3	Data collection	Was data collection planned before the index test and reference standard were performed prospectively or retrospectively?	Prospective = 1; Retrospective = 0
4	Reference standard	Was the rationale for the reference standard stated?	Stated = 1; Not stated = 0
5	Materials and methods	Were technical specifications of material and methods stated including how and when measurements were taken?	Fully Stated = 2; Partial = 1; Not stated = 0
6	Index Test	Were the definitions of and rationales for the units, cutoffs, and/or categories of the results of the index tests stated?	Stated = 1; Not stated = 0
7	Blinding	Were readers of index test and reference standard blinded to disease state of the participant?	Blinded = 1; Not blinded or not stated = 0
8	Completion	Was the number of participants that did not undergo index tests (no. of tests vs sample size) stated?	Stated=1; [If n numbers match but not stated, still = 1] Not stated = 0
9	Time interval	Was the time interval from index test to reference standard stated?	Stated=1; Not stated = 0

10	Distribution of severity of disease	Was there a representative distribution of severity of disease? (mild, moderate, severe AKI; non-oliguric vs oliguric)	Yes = 1; No = 0; Not stated =0
