S1 File Search strategies

The electronic databases PUBMED and EMBASE (2000 –15/02/2021) were searched for English-language academic peer-reviewed articles.

Search queries were conducted in a stepwise manner by breaking down each topic (e.g. coal mine dust lung diseases or prevalence or mortality or survival) into key concepts (each numbered step in Table 2) and searching individually. For each topic, alternative terms were used to cover all possible synonyms for that component. Individual search queries were then combined to create the final search query using BOOLEAN operators such as “AND” or “OR”. Filters used were: Publication date from 2000/01/01 to 2021/12/31; Humans; English.
