3.Literature screening and classification

Four Chinese databases, three English databases and two clinical trial registries imported a total of 57821 titles from NE literature management software. A total of 10473 duplicates were found in the literature review, and a total of 47,347 literatures in both Chinese and English were obtained after deconstructing.

3.1 Preliminary screening:

Through reading titles and abstracts, 39,375 unrelated literatures were prelimi narily screened out, and the remaining 7,972 literatures were related to traditio nal Chinese medicine. Among them, there were **3288 randomized controls**;219 non-randomized controls;109 systematic reviews and systematic evaluation reev aluation;30 meta-analyses;6 clinical guidelines, consensus and pathways; A coho rt study of 43;116 cross-sectional studies;83 case controls; Case series 343;25 c ase reports;11 papers of scheme registration;967 articles were reviewed.174 fam ous experience;2521 animal and cell experiments; It is inconvenient to classify 37 articles.

3.2 Literature screening of GbE-related RCTs:

In the 3288RCTs introduced into NE, 100 RCTs related to GbE were retriev ed through the keywords of Ginkgo leaf, Ginkgo leaf, Ginkgo biloba, GbE, etc. Among which 32 were inconsistent with the study intervention measures, 42 were excluded after reading the full text, 3 were repeated, and 23 were finally included.
