eTable 1. Characteristics of Included Studies

Studies included in **qualitative and quantitative** synthesis (network meta-analysis) (n=26)									
Trial, published year	Country	Population	Group (age)	Intervention	Drugs		Control		Outcomes
					ITT (No. randomized)	ITTI (No. confirmed)	ITT	ITTI	
Deng,2004	China (published in Chinese)	ILI (≤ 48h)	16-48	OSE 75 mg BID PLA	599	NA	577	NA	TTAS **(only ITT data reported)** Complications: sinusitis, tracheobronchitis, tonsillitis, bronchial asthma, otitis media, etc. AEs: GI, dizziness, etc.
Fan,2019	China (published in Chinese)	ILI (≤ 48h) RAT(+)	15-70	PER 600 mg single dose OSE 75 mg BID PLA	PER: 50 OSE: 57	PER: 47 OSE: 53	26	26	TTAS **(without ITTI HR or KM-curve)** Complications: Otitis media, sinusitis, pneumonia, etc. AEs: no detail definition mentioned.
Fry,2014	Bangladesh	ILI (≤ 120h) RAT(+)	All (≥1)	OSE 75 mg BID PLA	598	587	592	576	TTAS **(only ITT data reported)** Complication: Not reported. AEs: GI、severe AE (requiring hospital admission)
Hayden,1997	North America, Europe	ILI (≤ 48h)	Adults (≥18)	ZAN 10 mg BID PLA	132	85	144	89	TTAS (ITTI) Complication (antibiotics-prescribed) otitis media, sinusitis, etc. AEs: GI, upper respiratory tract, etc.
Hayden,2018	Japan	ILI (≤ 48h)	12-64	BAL 40/80 single dose OSE 75 mg BID PLA	BAL: 612 OSE: 514	BAL: 456 OSE: 377	PLA: 310	PLA: 231	TTAS (ITTI) Complications (antibiotic use) AEs: GI, nasopharyngitis, liver function, headache, dizziness, leukopenia, etc.
Hayden,2000	US, Canada, UK, Finland	ILI (≤ 36h)	≥5	ZAN 10 mg BID PLA	163	76	158	81	TTAS **(without ITTI HR or KM-curve)** Complications: Not reported. AEs: no detail definition mentioned (but including pneumonia).
Hedrick, 2000	US, Canada, Europe, Israel	ILI (≤ 36h)	**Children (5-12)**	ZAN 10 mg BID PLA	224	164	247	182	TTAS (ITTI) Complications: no detail definition mentioned. AEs: GI, respiratory disorder, laboratory abnormalities.

© 2021 Liu JW et al. *JAMA Network Open.*

Heinonen,2010	Finland	ILI (≤24h)	**Children (1-3)**	OSE 75 mg BID PLA	203	37	205	61	TTAS (ITTI) Complications: only acute otitis media, pneumonia reported. AEs: GI, bronchiolitis, exanthema, irritability, fatigue, headache, or decreased appetite, etc.
Ison,2020	Japan, South Korea, Taiwan, US, Europe, NZ, South Africa (17 countries)	ILI (≤ 48h)	≥12	BAL single dose OSE 75 mg BID PLA	BAL: 730 OSE: 725	BAL: 385 OSE:388	729	385	TTAS Complications: sinusitis, otitis media, bronchitis, pneumonia. AEs: bronchitis, sinusitis, diarrhea, nausea, etc.
Jong,2014	US, Canada, South America, Europe, India, NZ, South Africa (21 countries)	**Hospitalized** RAT(+)	≥6	PER 600 mg QD (5 days) PLA	NA	78	NA	43	TTAS **(without ITTI HR or KM-curve)** Complications: otitis, sinusitis, bronchitis, **pneumonia**. AEs: GI, serious AEs (COPD, **pneumonia**)
Kashiwagi,2000	Japan (published in Japanese)	ILI (≤ 36h)	≥16	OSE 75 mg BID PLA	154	121	162	130	TTAS (ITTI) Complications: NA AEs: GI, infection (**pneumonia**), musculoskeletal disorders, respiratory disorders, skin and subcutaneous disorders, metabolism disorders, etc.
Kohno,2010	Japan	ILI (≤ 48h)	Adults (20-64)	PER 300 mg single dose PER 600 mg single dose PLA	PER 300: 100 PER 600: 100	PER 300: 99 PER 600: 97	100	100	TTAS (ITTI) Complications: otitis media, bronchitis, sinusitis, pneumonia. AEs: GI, nasopharyngitis, liver function disorders, hematology disorders, metabolism disorders, etc.
Kohno,2011	Japan	ILI (≤ 48h) RAT(+)	Adults (≥20)	PER 300 mg QD PER 600 mg QD (1-5 days as needed)	PER 300: 21	NA	PER 600: 21	NA	TTAS **(only per-protocol data)** Complications: **pneumonia**, bronchitis, otitis media, sinusitis. AEs: GI, **pneumonia**, oral herpes infection, hematology disorders, etc.

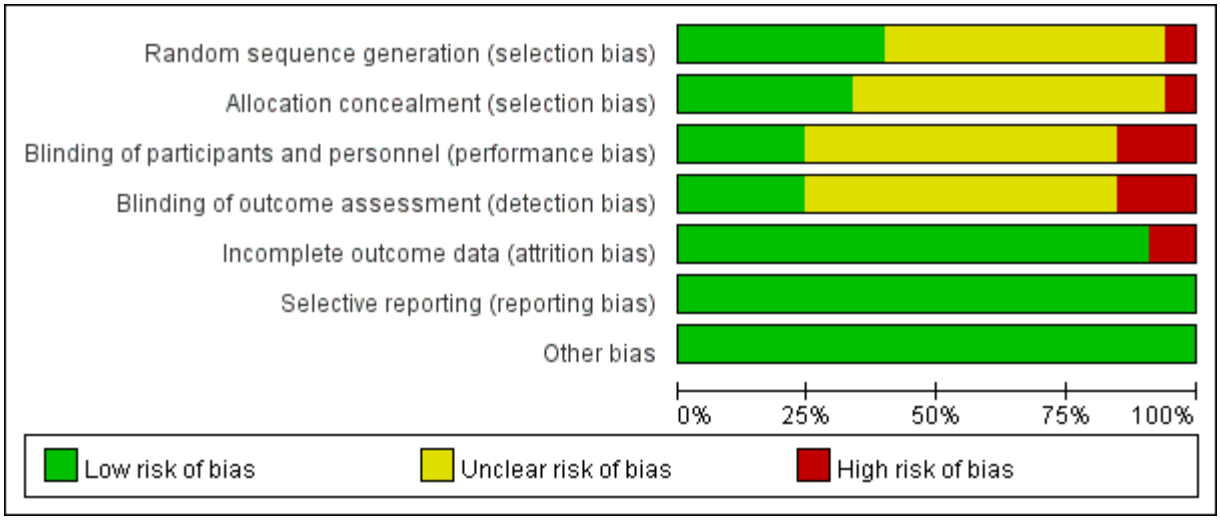
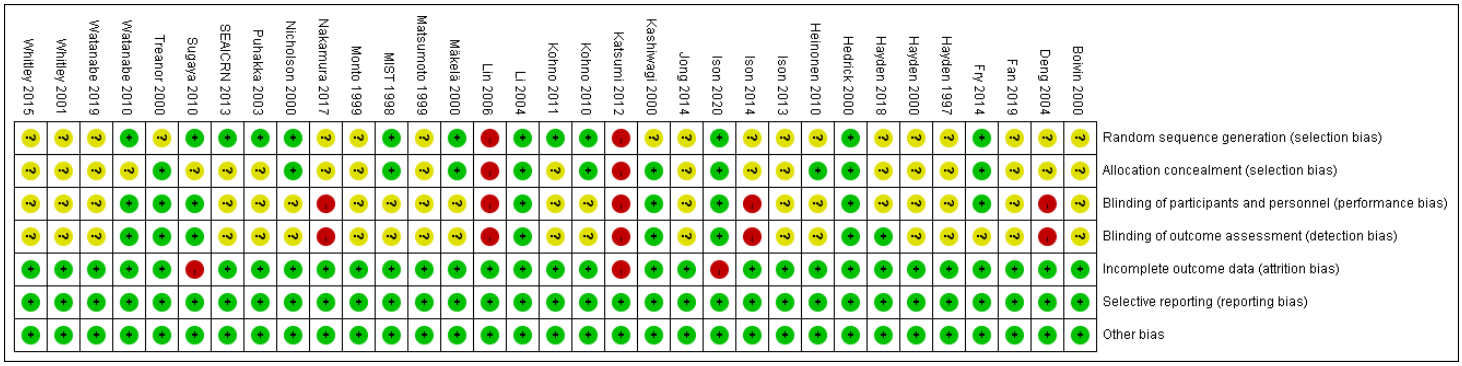
eFigure 1. Risk of Bias of Included Studies

Risk of bias graph



Risk of bias summary



Overall, 2 trials were judged to have a low risk of bias across all domains.
2 trials were judged to have a high risk of bias for sequence generation and allocation concealment due to inadequate randomization and assignments.
5 trials were open-labeled and therefore judged to have a high risk of performance bias.
Most studies were judged to have a low risk of bias for incomplete outcome data and selective reporting; however, 3 trials were judged to have a high risk of bias for incomplete outcome data, as drop-outs and loss to follow-up could have a clinically relevant impact on the intervention effect estimates.

eFigure 3. League Tables

Effect sizes presented on the upper triangle are direct comparisons (head-to-head studies) between the row and columns; the effect sizes on the lower triangle are network meta-analyses between the column and the row. Comparisons are based on hazard ratio (95% confidence intervals) in TTAS and risk ratio (95% confidence intervals) in other outcomes.

eTable 3. Sensitivity Analysis

Studies at serious risk of bias (ROB) of overall domains and blinding domain were excluded.

For the TTAS outcome, 1 trial (Lin, 2006) was excluded in both domains.
For the nausea outcome, 1 trial (Lin, 2006) was excluded in the overall domain; (Nakamura, 2017) and (Lin, 2006) were excluded in the domain of blinding.
No trial had a high risk of bias for the vomiting outcome.

1. Unable to assess because there are <2 studies available with non-zero events in both arms.
2. As per protocol, the funnel plot or Egger's test was not performed because of insufficient information (<10 studies).
3. Studies failed to blind patients and investigators that might lead to performance bias.
4. Studies had inadequate randomization and assignments that might be anticipated.
5. Studies had incomplete outcome data given that drop-outs and people lost to follow-ups could have clinically relevant impact on the intervention effect estimates.

1. There is no need to rate the indirect evidence since the certainty of the direct evidence is high and the contribution of the direct evidence to the network estimate is much greater than that of the indirect evidence.
2. Imprecise (wide 95% CI).
3. The confidence ratings for both direct comparisons are high.
4. The lower confidence rating of the two direct comparisons is moderate.
5. Probable intransitivity due to different severity of illness (outpatients or hospitalized patients).
6. Incoherence between direct and indirect evidence (dominant estimate not similar to network estimate).
