Note. Color highlighting of cells indicates whether or not information concerning different categories of negative events were reported in included studies: green = report concerning information on specific category of negative events (see first line); red = no report concerning information on specific category of negative events (see first line); yellow (only applied for dropouts) = report of other kind of dropouts (eg, withdrawals from study, treatment completers as defined by authors) that did not capture dropouts from treatment (ie, inverse of the completion rate, etc.).
